### 1.0 General Descriptions

#### 1.1 Introduction

The M156GWFA R0 is a Color Active Matrix Liquid Crystal Display with a back light system. The matrix uses a-Si Thin Film Transistor as a switching device. This TFT LCD has a 15.6 inch diagonally measured active display area with FHD resolution (1,920 horizontal by 1,080 vertical pixels array).

#### 1.2 Features

- Supported FHD Resolution
- LVDS Interface
- Wide View Angle
- Compatible with RoHS Standard

1.3 Product Summary

| Items                         | Specifications                                   | Unit               |
|-------------------------------|--|--------------------|
| Screen Diagonal               | 15.6   | inch               |
| Active Area (H x V)           | 344.16 x 193.59                                  | mm                 |
| Number of Pixels (H x V)      | 1,920 x 1,080                                    | -                  |
| Pixel Pitch (H x V)           | 0.17925 x 0.17925                                | mm                 |
| Pixel Arrangement             | R.G.B. Vertical Stripe                           | ı                  |

### 2.0 Absolute Maximum Ratings

**Table 1 Electrical & Environment Absolute Rating** 

| Item                  | Symbol   | Min.   | Max.  | Unit | Note     |
|-----------------------|----------|--------|-------|------|----------|
| Logic Supply Voltage  | $V_{DD}$ | (-0.3) | (4.0) | V    | (1),(2), |
| Operating Temperature | Tgs      | (-30)  | (85)  | °C   | (3),(4)  |
| Storage Temperature   | Та       | (-30)  | (85)  | °C   | (0),(1)  |

Note (1) All the parameters specified in the table are absolute maximum rating values that may cause faulty operation or unrecoverable damage, if exceeded. It is recommended to follow the typical value.

Note (2) All the contents of electro-optical specifications and display fineness are guaranteed under Normal Conditions. All the display fineness should be inspected under normal conditions. Normal conditions are defined as follow: Temperature: 25°C, Humidity: 55± 10%RH.

Note (3) Unpredictable results may occur when it was used in extreme conditions.  $T_a$ = Ambient Temperature,  $T_{gs}$ = Glass Surface Temperature. All the display fineness should be inspected under normal conditions.

Note (4) Temperature and relative humidity range are shown in the figure below. Wet bulb temperature should be lower than 38.3 °C and no condensation of water. Besides, protect the module from static electricity.

### 3.0 Optical Characteristics

The optical characteristics are measured under stable conditions as following notes.

**Table 2 Optical Characteristics** 

| Item                    | Conditions      |                 | Min.  | Тур.    | Max.  | Unit              | Note   |  |
|-------------------------|-----------------|-----------------|-------|---------|-------|-------------------|--|--|
|                         | Horizontal      | θ x+            | (80)  | (85)    | -     |                   |  |  |

#### Note (1) Measurement Setup:

The LCD module should be stabilized at given temperature ( $25^{\circ}$ C) for 30 minutes to avoid abrupt temperature changing during measuring. In order to stabilize the luminance, the measurement should be executed after lighting backlight for 30 minutes in a windless room.

### 4.2 Signal Electrical Characteristics

4.2.1 Signal Electrical Characteristics For LVDS Receiver

The built-in LVDS receiver is compatible with (ANSI/TIA/TIA-644) standard.

**Table 7 LVDS Receiver Electrical Characteristics** 

| Parameter                            | Symbol     | Min.   | Тур. | Max.   | Unit | Conditions            |
|--------------------------------------|------------|--------|------|--------|------|-----------------------|
| Differential Input High Threshold    | Vth        | 1      | -    | (+100) | mV   | V <sub>CM</sub> =1.2V |
| Differential Input Low Threshold     | VtI        | (-100) | -    | -      | mV   | V <sub>CM</sub> =1.2V |
| Magnitude Differential Input Voltage | $ V_{ID} $ | (100)  | -    | (600)  | mV   | -                     |
| Common Mode Voltage                  | $V_{CM}$   | (0.7)  | -    | (1.6)  | >    | -                     |

Note (1) Input signals shall be low or Hi- resistance state when VDD is off.

Note (2) All electrical characteristics for LVDS signal are defined and shall be measured at the interface connector of LCD.

**Figure 8 Voltage Definitions** 

**Table 8 LVDS AC Electrical Characteristics** 

| Parameter       | Symbol | Min. | Тур.   | Max. | Unit |
|-----------------|--------|------|--------|------|------|
| Clock Period    | TLVCP  | 1    | (T)    | 1    | ns   |
| Clock High Time | TLVCH  | 1    | (4T/7) | 1    | ns   |
| Clock Low Time  | TLVCL  | 1    | (3T/7) | 1    | ns   |

Note: T=1/Fclk

| Input PWM Frequency      |  | F <sub>PWM</sub>  | (100)       | -     | (1,000)   | Hz    | (1),(2),(5) |
| Duty Ratio               |  | PWM               | (10)        | -     | (100)     | %     | (1),(6)     |
| LED Life Time            |  | LT                | (50,000)    | -     | -         | Hours | (1),(7)     |

Note (1) All of the specifications are guaranteed under normal conditions. Normal conditions are defined as follow: Temperature: 25°C, Humidity: 55± 10%RH.

Note (2) All of the absolute maximum ratings specified in the table, if exceeded, may cause faulty operation or unrecoverable damage. It is recommended to follow the typical value.

Note (3) The specified  $V_{DD}$  current and power consumption are measured under the  $V_{DD}$  = 3.3 V,  $F_{V}$  = 60 Hz condition and White Pattern.

Note (4) The figures below is the measuring condition of  $V_{DD}$ . Rush current can be measured when

| Document Title | M156GWFA R0 Tentative Product Specification |            |            |          | 16/24 |
|----------------|---|------------|------------|----------|-------|
| Document No.   |   | Issue date | 2022/04/01 | Revision | 00    |

T<sub>RUSH</sub> is 0.5 ms.

Figure 11 V<sub>DD</sub> Rising Time

Note (5) The power consumption of LED Driver are under the  $V_{LED}$  = 12.0V, Dimming of Max luminance.

Note (6) Although acceptable range as defined, the dimming ratio is not effective at all conditions. The PWM frequency should be fixed and stable for more consistent luminance control at any specific level desired.

Note (7) The operation of LED Driver below minimum dimming ratio may cause flickering or reliability issue.

Note (8) The life time is determined as the sum of the lighting time till the luminance of LCD at the typical LED current reducing to 50% of the minimum value under normal operating condition.

| ESD Test                                      | Operating                    | Module  | Air   | ± 15 KV, 150pF(330Ohm) | (1),(2), (6)    |

Note (1) A sample can only have one test. Outward appearance, image quality and optical data can only be checked at normal conditions according to the IVO document before reliable test. Only check the function of the module after reliability test.

- Note (2) The setting of electrical parameters should follow the typical value before reliability test.
- Note (3) During the test, it is unaccepted to have condensate water remains. Besides, protect the module from static electricity.

Note (4) The sample must be released for 24 hours under normal conditions before judging. Furthermore, all the judgment must be made under normal conditions. Normal conditions are defined as follow: Temperature:  $25^{\circ}$ C, Humidity:  $55\pm 10\%$ RH.  $T_a$ = Ambient Temperature,  $T_{gs}$ = Glass Surface Temperature.

Note (5) The module should be fixed firmly in order to avoid twisting and bending.

Note (6) It could be regarded as pass, when the module recovers from function fault caused by ESD after resetting.

#### 9.0 General Precaution

#### 9.1 Using Restriction

This product is not authorized for using in life supporting systems, aircraft navigation control systems, military systems and any other appliance where performance failure could be life-threatening or lead to be catastrophic.

#### 9.2 Operation Precaution

(1)The LCD product should be operated under normal conditions.

Normal conditions are defined as below:

Temperature:  $25^{\circ}$ C Humidity:  $55\pm10\%$ 

Display pattern: continually changing pattern (Not stationary)

- (2) Brightness and response time depend on the temperature. (It needs more time to reach normal brightness in low temperature.)
- (3) It is necessary for you to pay attention to condensation when the ambient temperature drops suddenly. Condensate water would damage the polarizer and electrical contacted parts of the module. Besides, smear or spot will remain after condensate water evaporating.
- (4) If the absolute maximum rating value was exceeded, it may damage the module.
- (5) Do not adjust the variable resistor located on the module.
- (6) Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding may be important to minimize the interference.
- (7) Image sticking may occur when the module displayed the same pattern for long time.
- (8) Do not connect or disconnect the module in the "power on" condition. Power supply should always be turned on/off by the "power on/off sequence"
- (9) Ultra-violet ray filter is necessary for outdoor operation.

### 9.3 Mounting Precaution

- (1) All the operators should be electrically grounded and with Ion-blown equipment turning on when mounting or handling. Dressing finger-stalls out of the gloves is important for keeping the panel clean during the incoming inspection and the process of assembly.
- (2) It is unacceptable that the material of cover case contains acetic or chloric. Besides, any other material that could generate corrosive gas or cause circuit break by electro-chemical reaction is not desirable.
- (3) The case on which a module is mounted should have sufficient strength so that external force is not transmitted to the module directly.
- (4) It is obvious that you should adopt radiation structure to satisfy the temperature specification.
- (5) It should be attached to the system tightly by using all holes for mounting, when the module is assembled. Be careful not to apply uneven force to the module, especially to the PCB on the back.
- (6) A transparent protective film needs to be attached to the surface of the module.
- (7) Do not press or scratch the polarizer exposed with anything harder than HB pencil lead. In

| Document Title | M156GWFA R0 Tentative Product Specification |            |            | Page No. | 24/24 |
|----------------|---|------------|------------|----------|-------|
| Document No.   |   | Issue date | 2022/04/01 | Revision | 00    |

addition, don't touch the pin exposed with bare hands directly.

- (8) Clean the polarizer gently with absorbent cotton or soft cloth when it is dirty.
- (9) Wipe off saliva or water droplet as soon as possible. Otherwise, it may cause deformation and fading of color.
- (10) Clean the panel gently with absorbent cotton or soft cloth when it is dirty. Ethanol(C2H5OH) is allowed to be used. Ketone (ex. Acetone), Toluene, Ethyl acid, Methyl chloride, etc are not allowed to be used for cleaning the panel, which might react with the polarizer to cause permanent damage.
- (11) Do not disassemble or modify the module. It may damage sensitive parts in the LCD module, and cause scratches or dust remains. IVO does not warrant the module, if you disassemble or modify the module.

#### 9.4 Handling Precaution

- (1) Static electricity will generate between the film and polarizer, when the protection film is peeled off. It should be peeled off slowly and carefully by operators who are electrically grounded and with lon-blown equipment turning on. Besides, it is recommended to peel off the film from the bonding area.
- (2) The protection film is attached to the polarizer with a small amount of glue. When the module with protection film attached is stored for a long time, a little glue may remain after peeling.
- (3) If the liquid crystal material leaks from the panel, keep it away from the eyes and mouth. In case of contact with hands, legs or clothes, it must be clean with soap thoroughly.

#### 9.5 Storage Precaution

When storing modules as spares for long time, the following precautions must be executed.

- (1) Store them in a dark place. Do not expose to sunlight or fluorescent light. Keep the temperature between  $5^{\circ}$ C and  $35^{\circ}$ C at normal humidity.
- (2) The polarizer surface should not come in contact with any other object. It is recommended that they be stored in the container in which they were shipped.
- (3) It is recommended to use it in a short-time period, after it's unpacked. Otherwise, we would not guarantee the quality.

#### 9.6 Others

When disposing LCD module, obey the local environmental regulations.
