## 1.0 GENERAL DESCRIPTION

### 1.1 Introduction

38.2 inch module is a color active matrix TFT R-LCD module using a-silicon TFT's (Thin Film Transistors) as an active switching devices. It is a reflective type display operating in the normal white. The TFT-RLCD has a 38.2 inch diagonally measured active area with resolutions (1920 horizontal by 1080 vertical pixel arrays). Each pixel is divided into RED, GREEN, BLUE dots which are arranged in vertical stripe and this panel can display 16.7M colors.

### 1.2 Features

- Wide viewing angle (U/D/L/R): [Typ.55/50/55/55@CR>2:1](#)
- Color Gamut: 12%
- RoHS/Halogen Free
- LVDS Interface
- 0.5T +0.5T glass

### 1.3 Application

- IoT Production

**1.4 General Specification** Table 1-1 General Specifications

Parameter	Specification	Unit	Remarks
Active area	845.57(H)x475.63(V)	mm	-
Number of pixels	1920(H) × RGB ×1080(V)	pixels	
Pixel pitch	146.8 × 440.4	um	
Pixel arrangement	RGB Vertical stripe		
Display colors	16.7M	colors	
Color gamut	12	%	Typ.
Display mode	Normally White/Reflective		
Viewing Direction (Human Eye)	U/D/L/R 55/50/55/55	Deg.	Typ.
Surface coating	AG:3%,AF:110±5°		
Dimensional outline	892*532*7.92	mm	Thickness: 9mm Max
Weight	7400 Spec, 7800 Max	g	
Power Consumption	2.3 (LCD) + 30.24 (Front Light)	Watt	Typ.
Bezel width	22.7/22.7/22.7/22.7	mm	(L/R/U/D)
Driver IC	6 * ICNL9308	EA	COF

Note:

1.At the U/D/L/R direction, the viewing angle is different;

**2.0 ABSOLUTE MAXIMUM RATINGS**

The followings are maximum values which, if exceed, may cause faulty operation or damage to the unit. The operational and non-operational maximum voltage and current values are listed in Table 2-1

Table 2-1 Environment Absolute Maximum Ratings

Parameter	Symbol	Min.	Max.	Unit	Remarks
LCD Logic Voltage	VCC	-0.3	14	V	Ta=25+/-2°C
Operating Temperature (Humidity)	T <sub>OP</sub>	-20	+70	°C	
	RH	-	90	%	At 60°C
Storage Temperature (Humidity)	T <sub>ST</sub>	-30	+80	°C	
	RH	-	90	%	At 60°C

**3.4 Electrical Specifications**

Table 3-3 Electrical Specifications

Ta=25+/-2°C

Parameter		Symbol	Values			Unit	Remark
			Min	Typ	Max		
Power Supply Input Voltage		VCC	11.5	12	12.5	Vdc	
Power Supply Ripple Voltage		VRP			300	mV	Note 3
Power Supply Current		ICC	-	192	417	mA	Note 1&4
Power Consumption		PCC		2.3	5	Watt	
Rush current		IRUSH	-	-	3	A	Note 2
LVDS Interface	Differential Input High Threshold Voltage	VLVTH	+100		+300	mV	
	Differential Input Low Threshold Voltage	VLVTL	-300		-100	mV	
	Common Input Voltage	VLVC	1.0	1.2	1.4	V	

Notes : 1. The supply voltage is measured and specified at the interface connector of LCM.

The current draw and power consumption specified is for VCC=12.0V, Frame rate=60Hz

Clock frequency = 74.25 MHz. Test Pattern of power supply current

Test pattern: Color Test

2. Duration of rush current is about 2 ms and rising time of VCC is  $520 \mu\text{s} \pm 20\%$

3. Ripple Voltage should be covered by Input voltage Spec.

4. Calculated value for reference (Input pins\*VPIN ×IPIN) including inverter loss.

## 4.0 OPTICAL SPECIFICATIONS

### 4.1 Overview

The test of Optical specifications shall be measured in a dark room (ambient luminance  $\leq 1$ lux and temperature =  $25 \pm 2^\circ\text{C}$ ) with the equipment of Luminance meter system (Goniometer system and TOPCON BM-5) and test unit shall be located at an approximate distance 15cm from the R-LCD surface at a viewing angle of  $\theta$  and  $\Phi$  equal to  $0^\circ$ , and the Incident light angle is  $30^\circ$ . The center of the measuring spot on the Display surface shall stay fixed.

Table FOB+front light (TLCM) Optical Specifications

Parameter			Symbol	Condition	Min.	Typ.	Max.	Unit	Remark

Parameter	Condition	Min.	Typ.	Max.	Remark
Reflectance	Θ = 0° (Center) Normal Viewing Angle	9%	10.5%	-	CM-26d

**Note :**

- Viewing angle is the angle at which the contrast ratio is greater than 10. The viewing are determined for the horizontal or 3, 9 o'clock direction and the vertical or 6, 12 o'clock direction with respect to the optical axis which is normal to the LCD surface. (See FIGURE 1 shown in Appendix)
- Contrast measurements shall be made at viewing angle of θ= 0° and at the center of the LCD surface .Reflectance shall be measured with all pixels in the view field set first to white, then to the dark (black) state. (See FIGURE 2 shown in Appendix)  
Reflectance Contrast Ratio (CR) is defined mathematically.

$$CR = \frac{\text{Reflectance when displaying a white raster}}{\text{Reflectance when displaying a black raster}}$$

- Center reflectance of white is defined as the LCD surface. Reflectance shall be measured with all pixels in the view field set first to white. This measurement shall be taken at the locations shown in FIGURE 2 for a total of the measurements per display.
- The color chromaticity coordinates specified in Table 4. shall be calculated from the spectral data measured with all pixels first in red, green, blue and white. Measurement condition is D65 source.
- The electro-optical response time measurements shall be made as FIGURE 3 shown in Appendix by switching the "data" input signal ON and OFF. The times needed for the reflectance to change from 10% to 90% is Ref, and 90% to 10% is Ref.
- Contrast measurements with front light on shall be made at viewing angle of θ= 0° and at the center of the LCD surface Luminance shall be measured with all pixels in the view field set first to white, then to the dark (black) state.

$$CR = \frac{\text{Luminance when displaying a white raster}}{\text{Luminance when displaying a black raster}}$$

**7. Luminance measurement**

The test condition is at ILED=420mA and measured on the surface of LCD module at 25°C.

- The data are measured after LEDs are lighted on for more than 5 minutes and LCM displays are fully white. The brightness is the center of the LCD. Measurement equipment CS2000 or similar equipments(Field of view:1deg,Distance:50cm)
- Measuring surroundings: Dark room.
- Measuring temperature: Ta=25°C.
- Adjust operating voltage to get optimum contrast at the center of the display.
- Measured value at the center point of LCD panel must be after more than 5 minutes while backlight turning on.

**4.2 OPTICAL TEST APPENDIX**

Figure 4-1 Reflectance View angle measurement Measurement Set Up

$$R_{\text{样品}} = \frac{I_{\text{reflective}}}{I_{\text{initial}}} \times R_{\text{标准白}} \quad R_{\text{标准白板}} \approx 98\%$$

Test Equipment: CS200  
Light Source: D65  
Light Incidence: 30°

**6.0 RELIABILITY**

Table 6-1 Reliability test

No	Test Items	Conditions	Remark
1	High temperature storage test	Ta = 80 °C, 240 hrs	
2	Low temperature storage test	Ta = -30 °C, 240 hrs	
3	High temperature operation test	Ta = 70 °C, 240 hrs	
4	Low temperature operation test	Ta = -20 °C, 240 hrs	
5	High temperature & high humidity operation test	Ta = 60 °C, 90%RH, 240 hrs	
6	Thermal shock	Ta = -40 °C ↔ 85°C (0.5 hr), 100 cycle	Storage
7	Image Sticking	7*5 Checkerboard,1H, 25°C;Inspection Pattern:50% grey; ≤Lv2, After 5 mins, the image sticking must be disappeared completely	
8	ESD test	Air Voltage:±8KV Contact Voltage:±4KV R: 1.5kΩ C: 100pF CLASSB	
9	Vibration Test	Random:1.47 Grms Hz, 5~200Hz XYZ 1H	

Note: After the reliability test, the product only guarantee function normally without any fatal defect (non-display, line defect, abnormal display etc ). All the cosmetic specification is judged before the reliability test.

## 9.0 PRECAUTIONS

### 9.1 Handling

- (1) Use fingerstalls with soft gloves in order to keep display clean during the incoming inspection and assembly process.
- (2) You must mount a module using specified mounting holes (Details refer to the drawings).
- (3) Please make sure to avoid external forces applied to the Source PCB or FPC and D-IC during the process of handling or assembling. If not, It causes panel damage or malfunction.
- (4) Note that polarizers are very fragile and could be easily damaged. Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment.
- (5) Do not pull or fold the source D-IC which connect the source PCB or FPC and the panel. Do not pull or fold the LED wire.
- (6) After removing the protective film, when the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with alcohol or purified water. Do not strong polar solvent because they cause chemical damage to the polarizer
- (7) Wipe off saliva or water drops as soon as possible. Their long time contact with . polarizer causes deformations and color fading.
- (8) Protection film for polarizer on the module shall be slowly peeled off just before use so that the electrostatic charge can be minimized.
- (9) Since the LCD is made of glass, do not apply strong mechanical impact or static load onto it. Handling with care since shock, vibration, and careless handling may seriously affect the product. If it falls from a high place or receives a strong shock, the glass may be broken.
- (10) Do not disassemble the module.
- (11) To determine the optimum mounting angle, refer to the viewing angle range in the specification for each model.
- (12) If the customer's set presses the main parts of the LCD, the LCD may show the abnormal display. But this phenomenon does not mean the malfunction of the LCD and should be pressed by the way of mutual agreement.
- (13) Do not drop water or any chemicals onto the LCD's surface.
- (14) The ITO pad area needs special careful caution because it could be easily corroded. Do not contact the ITO pad area with HCFC, Soldering flux, Chlorine, Sulfur, saliva or fingerprint. To prevent the ITO corrosion, customers are recommended that the ITO area would be covered by UV or silicon.

## 9.2 Operating Precautions

- (1) Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.
- (2) Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimized the interference.
- (3) The electrochemical reaction caused by DC voltage will lead to LCD degradation, so DC drive should be avoided.
- (4) The LCD modules use C-MOS LSI drivers, so customers are recommended that any unused input terminal would be connected to Vdd or Vss, do not input any signals before power is turn on, and ground you body, work/assembly area, assembly equipments to protect against static electricity.
- (5) Do not exceed the absolute maximum rating value. (supply voltage variation, input voltage variation, variation in part contents and environmental temperature, and so on) Otherwise the Module may be damaged.
- (6) Connectors are precise devices for connecting PCB and transmitting electrical signals. Operators should insert and unplug MDL in parallel when assembling MDL.
- (7) Do not connect or disconnect the cable to/ from the module at the "Power On" condition.
- (8) When the module is operating, do not lose CLK, HS, VS signals. If any one these signals is lost, the LCD panel would be damaged.
- (9) Obey the supply voltage sequence. If wrong sequence is applied, the module would be damaged.
- (10) Do not re-adjust variable resistor or switch etc.

### 9.3 Electrostatic Discharge Control

- (1) Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc. And don't touch interface pin directly. Keep products as far away from static electricity as possible.
- (2) Avoid the use work clothing made of synthetic fibers. We recommend cotton clothing or other conductivity-treated fibers.

### 9.4 Precautions for Strong Light Exposure

Strong light exposure causes degradation of polarizer and color filter. It is not allowed to store or run directly in strong light or in high temperature and humidity for a long time.

### 9.5 Storage Precautions

- (1) When storing the LCD modules, avoid exposure to direct sunlight or to the light of fluorescent lamps.
- (2) The LCD modules should be stored under the storage temperature range. the recommend condition is: Temperature : 0°C~ 40°C, Relatively humidity: ≤80%, and no more than 1 year.
- (3) The LCD modules should be stored in the room without acid, alkali and harmful gas.

### 9.6 Handling Precautions for Protection Film (不适用于Q/Single出货产品)

- (1) Remove the protective film slowly, keeping the removing direction approximate 30-degree not vertical from panel surface, If possible, under ESD control device like ion blower, and the humidity of working room should be kept over 50%RH to reduce the risk of static charge.
- (2) In handling the LCD, wear non-charged material gloves. And the conducting wrist to the earth and the conducting shoes to the earth are necessary.

### 9.7 Operation Condition Guide

- (1) Lifetime in this spec. is guaranteed only when Commercial Display is used according to operating usages.
- (2) Module used in unnormal orientation mode, need to confirm with the manufacturer.
- (3) Do not exceed the absolute maximum rating value. (supply voltage variation, input voltage variation, variation in part contents and environmental temperature, and so on) Otherwise the Module may be damaged.

**PROPRIETARY NOTE**

- (4) Dew drop atmosphere should be avoided.
- (5) The storage room should be equipped with a good ventilation facility, which has a temperature controlling system.
- (6) When expose to drastic fluctuation of temperature (hot to cold or cold to hot) ,the LCD may be affected; Specifically, drastic temperature fluctuation from cold to hot ,produces dew on the LCD's surface which may affect the operation of the polarizer and the LCD.
- (7) Response time will be extremely delayed at lower temperature than the operating temperature range and on the other hand at higher temperature LCD may turn black at temperature above its operational range. However those phenomena do not mean malfunction or out of order with the LCD. The LCD will revert to normal operation once the temperature returns to the recommended temperature range for normal operation.

9.8 Others

- (1)When returning the module for repair or etc., Please pack the module not to be broken. We recommend to use the original shipping packages.
- (2) In order to prevent potential problems, flicker should be adjusted by optimizing the Vcom value in customer LCM. (适用于Q panel/single/OC出货)
- (3) If the liquid crystal material leaks from the panel, it should be kept away from the eyes or mouth. In case of contact with hands, legs or clothes, it must be washed away thoroughly with soap.
- (4) For the crash damaged or unnecessary LCD, it is recommended to wash off liquid crystal by either of solvents such as acetone and ethanol and should be burned up later.
- (5) If you should swallow the liquid crystal, first, wash your mouth thoroughly with water, then drink a lot of water and induce vomiting, and then, consult a physician.
- (6) If the liquid crystal should get in your eyes, flush your eyes with running water for at least fifteen minutes.
- (7) Client needs to add heat dissipation design , such as fan, water cooling , etc.
- (8) After assembling into modules, guarantee that the temperature rise of panel surface does not exceed 20 C at room temperature.
- (9) Customers need to drive current down according to derating curve.
