

## Damped Load Cells for Rotary Filling Machines

### FEATURES

- Capacities: 3 kg, 17 lbs, 23 lbs
- Stainless steel construction
- Insensitive to rotary dynamic forces
- Single-point performance
- Rotary speed to 13 rpm at 1m radius
- Sealed wash down configuration

### APPLICATIONS

- Rotary filling machines

### DESCRIPTION

The Model 1430 is uniquely designed to reduce weighing errors resulting from dynamic forces occurring on rotary liquid filling machines. The Model 1430 will provide high weighing accuracies when operated over a range of 0 to 13 rpm at a mounting location up to 1 meter radius.

The sealed stainless steel construction of the Model 1430 provides safe operation in applications subjected to

caustic or heavy wash down environments. The rugged construction provides significant overload protection both in the weighing axis as well as against side loading. Side loads, such as occurring in bottle jams of up to 300 kg, have been applied to units with no significant zero change.

The Model 1430 features adjustable viscous damping for shorter settling times and for faster machine cycles.
