i-CON PICO

Error Messages

Error Messages in the Soldering Station i-CON PICO

The i-CON PICO carries out an automatic error diagnosis. The result of a diagnosis is displayed as an error code. The error codes are listed in the following table. Error messages have to be confirmed with a button push. After the error has been eliminated and the error message has been confirmed, the connected soldering tool will be heated again.

Code	Meaning	Cause	Remedy
1	microSD card error	No configuration file stored, or	Store configuration file, insert card
		card obliquely inserted	consistently straight ahead
2	Calibration erroneous	Station no longer calibrated	Have factory calibration carried out
3xx	-	Messages for function testing	-
		during manufacturing	
4	Erroneous measurement	Measurement reading of KTY	Have soldering tool and soldering
	of the environment	not OK	station checked
	temperature		
501	i-CON PICO system error	Control electronics system	Have control electronics replaced
		error, or control electronics not	or check connecting cables
		properly connected	
502	i-CON PICO system error	Voltage not measured	Have control electronics replaced
		correctly	
6	i-TOOL PICO not	The soldering station is unable	Have the i-TOOL PICO connecting
	recognized	to recognize the connected i-	cables inspected
		TOOL PICO, or the i-TOOL	
		PICO was plugged in upside	
		down	
7	Heating element or	Heating element is not	Check or replace heating element
	thermocouple not	installed correctly,	
	recognized	thermocouple error	
8	Heating element	Heating element defect	Check or replace heating element
9	Data lost	Parameter/Configuration data	Reset settings by confirmation of
		destroyed	the error, set changes again
98	Mains frequency error	Mains frequency outside of	-
		frequency range (± 10%)
