# 1 Overview

DSO3001 series all silicon oscillator is a clock free oscillator without quartz and MEMS devices. It is a high reliable clock oscillator which can still work normally under harsh environment and strong vibration. The chips can be manufactured to achieve multi-frequency and multi-format output from 10KHz to 350MHz, and maintain low jitter and frequency stability throughout the operation range.

Thanks to the built-in temperature and stress sensors, the DSO3001 all silicon oscillator can adapt to the harsh working environment. The built-in LDO and filter circuit greatly enhance the power supply noise suppression ability of the chip. Flexible clock frequency configuration and output format configuration provide maximum convenience for customer product design.
