CAUTIONS

- 1) The recommended soldering temperature range is $250\pm 10^{\circ}\text{C}$ with the duration of 2~5s. It is not suggested to apply reflow soldering method, if it is required indeed, please contact with our technicians. It is general required that the wave soldering temperature at 250°C shall not more than 2s; The above chart is the wave soldering temperature distribution chart we recommended for your reference.
- 2) Relay is on the "reset" or "set" status when delivery, with the consideration of shock risen from transit and relay mounting, relay would be changed to "set" or "reset" status, therefore, when application (connecting the power supply), please reset the relay to "set" or "reset" status on request.
- 3) In order to maintain "set" or "reset" status, energized voltage applied across the coil should reach the rated voltage, impulse width should be 5 times more than "set" or "reset" time. Do not energize voltage to "set" coil and "reset" coil simultaneously. And also long energized time (more than 1 min) should be avoided.
- 4) Keep the product away from strong magnetic field during transportation, storage and application, to avoid change of set/reset voltage.
