Current supply v	of digital oltage	liovcc	-	20	35	Ma	VCI=3.3V, color bar pattern
Current of analog supply voltage		lva	-	35	50	Ma	

5.2 Backlight Unit Driving Condition

Ite	Symbol	Min.	TYP.	Max.	Unit	Remark
m						
Forward Current	lf	-	80	-	Ma	
Forward Current Voltage	V_{F}	2.8	3.1	3.3	V	
Backlight Power Consumption	W _{BL}	224	248	256	mW	(4LED Parallel)
Operating Life Time		20000			hrs	Note 2, Note 3

Note1: The LED driving condition is defined for each module.

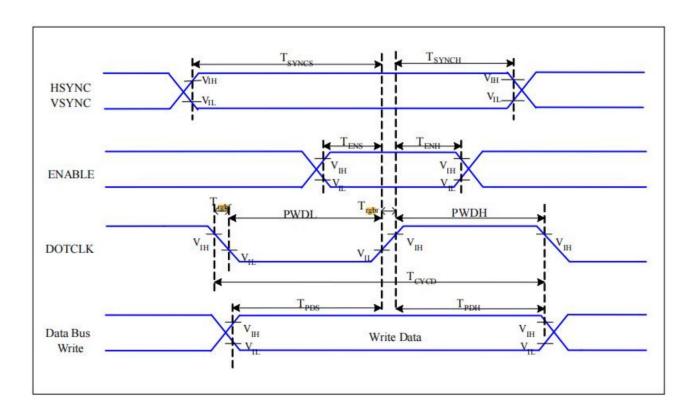

Note2: When LCM is operated, the stable forward current should be inputted. And forward voltage is for reference only.

Note3: Optical performance should be evaluated at $Ta=25^{\circ}C$ When LED is driven at high current, high ambient temperature & humidity condition. The life time of LED will be reduced. Operating life means brightness goes down to 50% initial brightness. Typical operating life time is estimated data.

Note4: The LED driving condition is defined for each LED module.

Note: 1. The minimum blanking time depends on the GIP timing of the panel specification

^{2.} To ensure the compatibility of different panels, it is recommended to use the typical setting.

6.3 System Bus Timing for RGB Interface

The timing chart of RGB interface DE mode is shown as follows.

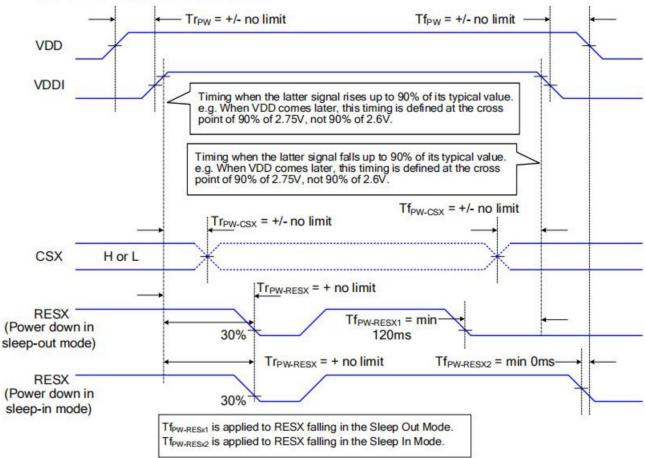

Note: The setting of front porch and back porch in host must match that in IC as this mode.

Test Conditions:

1.IF= 80 Ma, VF=3.2 V and the ambient temperature is 25 \pm 2 $^{\circ}\mathrm{C}$.humidity is 65 \pm 7%

2. The test systems refer to Note 1 and Note 2.

Note 1: Definition of optical measurement system.

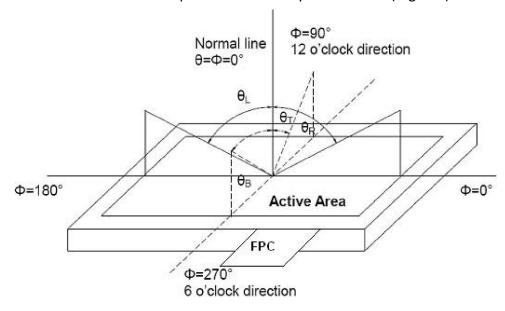

Properties are measured at the center point of the LCD screen. All input terminals LCD panel must be ground when measuring the center area of the panel.

The center of the screen

Note 2: Definition of viewing angle range and measurement system.

Viewing angle is measured at the center point of the LCD by CONOSCOPE(ergo-80).

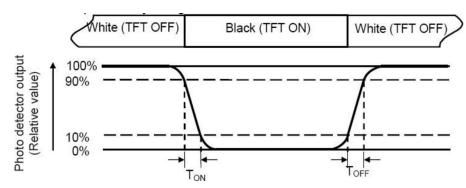

Note 3: Definition of contrast ratio

Contrast ratio (CR) = Luminance measured when LCD is on the "White" state Luminance measured when LCD is on the "Black" state

Note 4: Definition of response time

The response time is defined as the LCD optical switching time interval between "White" state and "Black" state. Rise time (T_{ON}) is the time between photo detector output intensity changed from 90%

to 10%. And fall time (T_{OFF}) is the time between photo detector output intensity changed from 10% to 90%.

Note 5: Definition of color chromaticity (CIE1931)

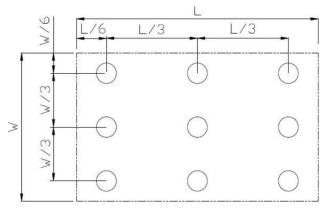

Color coordinates measured at center point of LCD.

Note 6: Definition of luminance uniformity

Active area is divided into 9 measuring areas (Refer Fig. 2). Every measuring point is placed at the center of each measuring area.

Luminance Uniformity (U) = Luminance min / Luminance max

L-----Active area length W----- Active area width

Luminance max: The measured Maximum luminance of all measurement position. Luminance min: The measured Minimum luminance of all measurement position.

Note 7: Definition of luminance:

Measure the luminance of white state at center point

9.Environmental / Reliability Test

No.	Items	Condition	Inspection after test
1	High Temperature Storage	T = 80°C for 120 hr	Inspection after 4 hours storage at room temperature, the sample shall be free from defects: 1.Air bubble in the LCD 2.Seal leak; 3.Non-display; 4.missing segments; 5.Glass crack; 6.Current IDD is twice higher than initial value.
2	Low Temperature Storage	T = -30°C for 120 hr	
3	High Temperature Operating	T = 70°C for 120 hr	
4	Low Temperature Operating	T = -20℃ for 120 hr (But no condensation of dew)	
5	High Temp. and High Humidity Operating	T = 60°C/90% for 96 hr (But no condensation dew)	
6	Thermal Shock	-20±2℃~25~70±2℃×10cycles (30min.) (5min.) (30min.)	
7	ESD	Voltage:±2KV R: 330Ω C: 150pF Air discharge, 10time	

Note1: Ts is the temperature of panel's surface.

Note2: Ta is the ambient temperature of samples

10.Precautions for Use of LCD Modules Handling Precautions

10.1Handling Precautions

- 10.1.1 The display panel is made of glass. Do not subject it to a mechanical shock by dropping it from a high place, etc.
 - 10.1.2 If the display panel is damaged and the liquid crystal substance inside it leaks out, be sure not to get any in your mouth, if the substance comes into contact with your skin or clothes, promptly wash it off using soap and water.
 - 10.1.3 Do not apply excessive force to the display surface or the adjoining areas since this may cause the color tone to vary.
 - 10.1.4 The Polarizer covering the display surface of the LCD module is soft and easily scratched. Handle this Polarizer carefully.
 - 10.1.5 If the display surface is contaminated, breathe on the surface and gently wipe it with a soft dry cloth. If still not completely clear, moisten cloth with one of the following solvents:
 - isopropyl alcohol
 - Ethyl alcohol

Solvents other than those mentioned above may damage the Polarizer. Especially, do not use the following:

- Water
- Ketone
- Aromatic solvents
- 10.1.6 Do not attempt to disassemble the LCD Module.
- 10.1.7 If the logic circuit power is off, do not apply the input signals.
- 10.1.8 To prevent destruction of the elements by static electricity, be careful to maintain an optimum work environment.
 - 10.1.8.1 Be sure to ground the body when handling the LCD Modules.

Tools required for assembly, such as soldering irons, must be properly ground.

- 10.1.8.2 To reduce the amount of static electricity generated, do not conduct assembly and other work under dry conditions.
- 10.1.8.3 The LCD Module is coated with a film to protect the display surface. Be care when peeling off this protective film since static electricity may be generated.

10.2 Storage Precautions

- 10.2.1When storing the LCD modules, avoid exposure to direct sunlight or to the light of fluorescent lamps.
- 10.2.2The LCD modules should be stored under the storage temperature range. If the LCD modules will be stored for a long time, the recommend condition is: Temperature : 0 $^{\circ}$ C Relatively humidity: \leq 80%
- 10.2.3The LCD modules should be stored in the room without acid, alkali and harmful gas.

10.3Transportation Precautions

The LCD modules should be no falling and violent shocking during transportation, and also should avoid excessive press, water, damp and sunshine.
