## 1. Design concept of Product

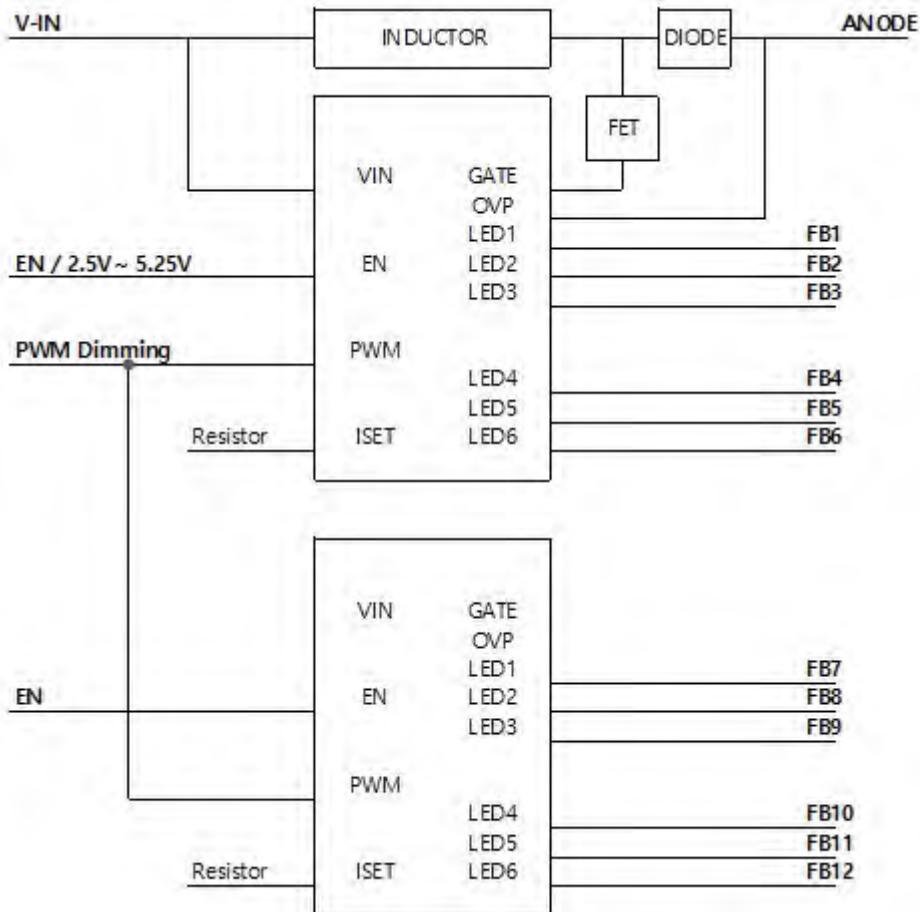

This product has been designed for providing a wide diming supportable LED Driver.

In order to overcome the difficulty from the limitation of diming range by ordinary LED Drivers in the market.

The basic parameters of diming range by this LED Driver are :

- the supportable Contrast Ratio : 5000 : 1
- the supportable Backlight Channel : total 12 channels by 2 chip solution)
- the supportable Current per each Backlight Channel : 200mA / Channel

## 2. Block Diagram

### 3. Electrical Parameters

#### 3.1. Input Requirements

Parameter	Symbol	Values			Unit	Remark	
		Min	Typ	Max			
Power Supply Input Voltage	VBL	10.8		26.4	Vdc	** 1	
Power Supply Input Current	IBL	-	-	1.91	A	VBL = 12V Ext VBR-B =100%	
	IBL	-	-	1.66	A	VBL = 24V Ext VBR-B =100%	
Power Consumption	PBL	-	-	35 23	W	Input 24V Input 12V	
Input Voltage for Control System Signals	On/Off	On	V on	2.4	-	5.25	Vdc
		Off	V off	-0.3	-	0.8	Vdc
	Pulse Duty Level (PWM)	High Level	2.5	-	5.25	Vdc	HIGH : On duty LOW : Off duty ** 2
		Low Level	0.0	-	0.7	Vdc	
		Normal Freq.	90		220	Hz	
		Freq. Range	60		10K	Hz	
		Duty (5000:1)	0.02	-	100	%	

\*\* 1) The LED string voltage has to be higher than the input voltage (max) and the difference must be at least 3V deviation.

\*\* 2) If user needs to adopt the PWM Duty of under 10% level, the dimming frequency should be under 120Hz level.

### 3.2. Output Requirements

#### 3.2.1 Maximum Output Voltage and Current

Specified LCD Model	Output Connector	Numbers of Supportable Channel	Output Voltage Range (V)			Output Constant Current (mA)		
			Min.	Typ.	Max.	Min.	Typ.	Max.
None (Factory Default Condition)	depending on user's choice among CN300, CN400 & CN500	1CH ~ 12CH	15	-	75	-	-	2400

[Note] In case of specified LCD Model, please be informed of all the parameters in the above table on the Chapter 12. Appendix-A of this Data Sheet.

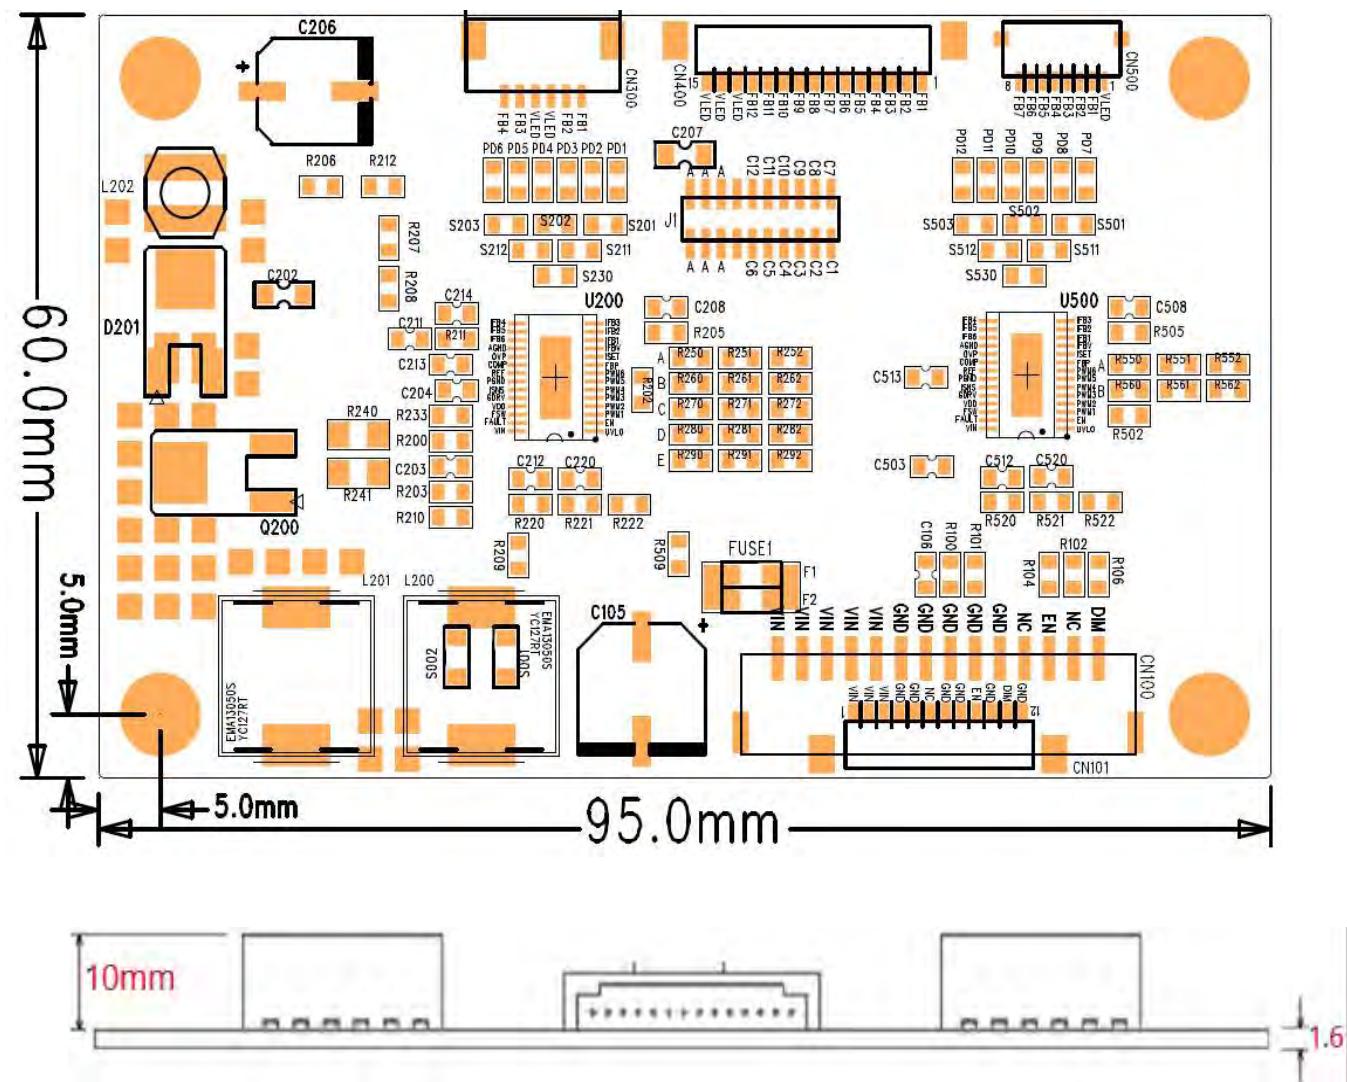

#### 3.2.2 Over Voltage Protection (OVP)

The voltage will not exceed the upper trip limit.

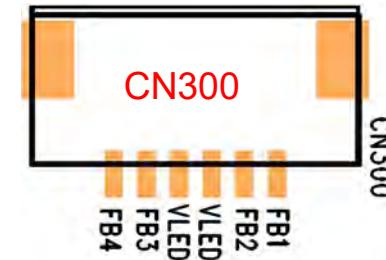

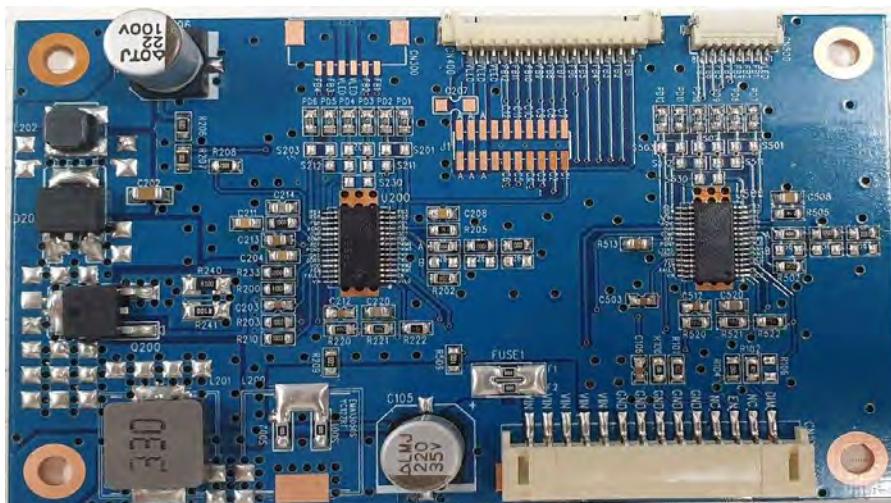

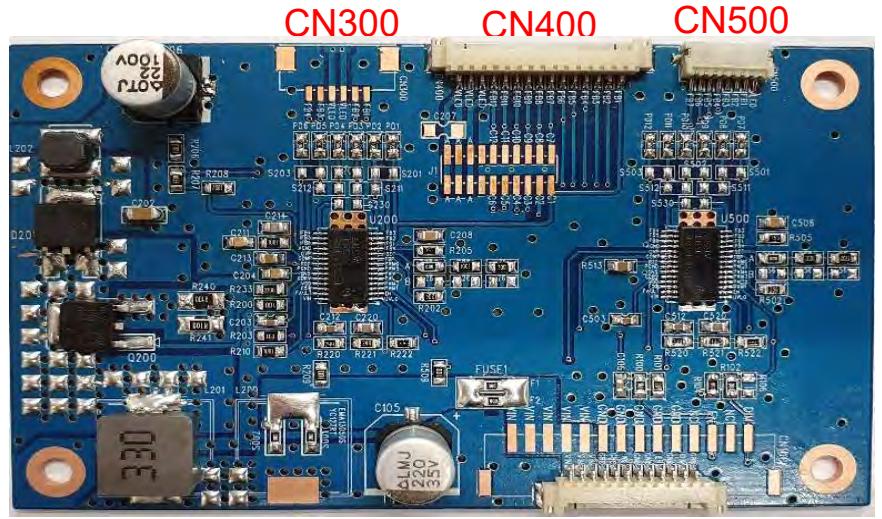

The noise spikes that exceed the lower trip limit of less than 10  $\mu$ s will not clamp the output voltage to zero.

Voltage	Over Voltage Protection	
	Range[V]	Protection
Output	This LED Driver was designed based on the OVP setting at 20% ~ 30% higher level than the forwarding(string) voltage of panels in use.	Shut Down

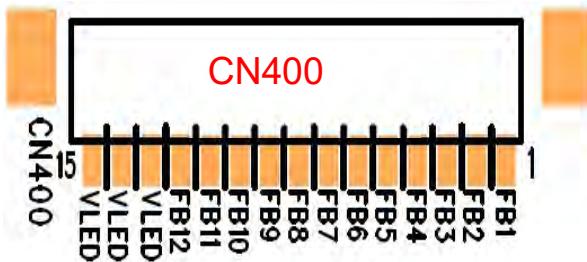

#### **4. Dimension (60mm x 95mm x 10mm, 30g Weight)**

Rear View

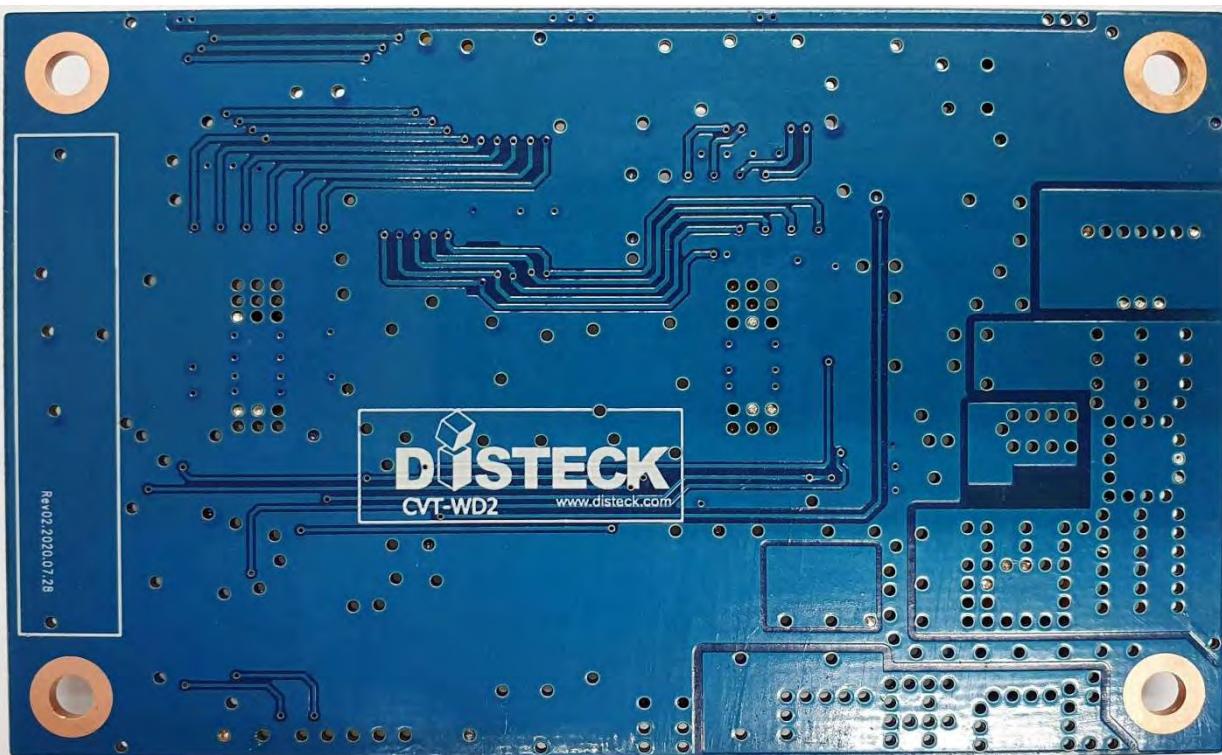

## 6.2 Optional Model for AUO 21.5", P215HAN02.0

## Top View

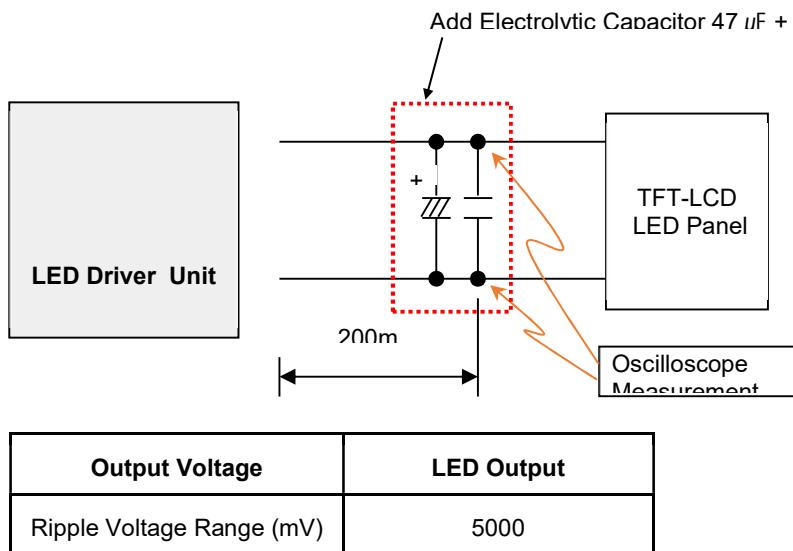

## Rear View

## 7. Power Characteristics

### 7.1 Ripple and Noise

The ripple and noise are defined as a periodic or random signal over frequency band at the 10Hz ~ 20MHz, measuring by an oscilloscope capable 20MHz bandwidth.

※ The ripple & noise are measured at the 20MHz bandwidth by a 12" twisted pair-wire which is cut off through the 0.1uF & 47uF parallel capacitor.

#### ☞ Test condition

- Temperature: 25°C room temperature
- Test equipment: PWM Dimming 100%

### 7.2 Overshoot

The output overshoot at the boot up must not exceed 25% than ordinary operating voltage value with or without under the working load condition.

### 7.3 In-rush

At the moment of turning on, the rise time of output voltage has to be shorter than 200msec, which is measured from the 10% point to the 90% point at the normal state

#### ☞ Test condition

- Temperature : 25°C room temperature
- Test equipment : Resistance load

## 8. Absolute Rating

### 8.1 Temperature

- Operating Temp. : -35 ~ 85°C (optional guarantee – up to -40°C)
- Storage Temp. : -35 ~ 85°C (optional guarantee – up to -40°C)

### 8.2 Humidity

- Operation humidity : 20 ~ 85% non-condensate
- Storage humidity : 5 ~ 95% non-condensate

## 9. Reliability Test

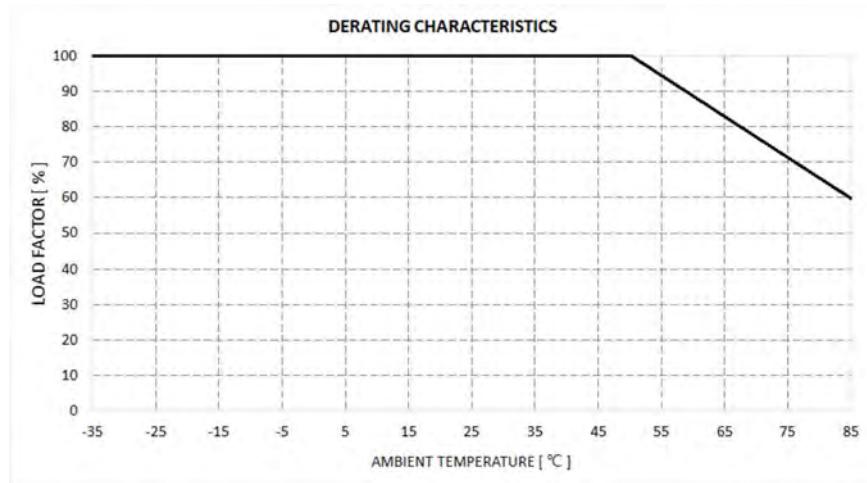

### 9.1 Environment Test

Adopted Test	Test method																		
Intermittent Operating Stability Test	The power supply unit should be On&Off for 25,000 hours at an interval of 10 seconds at maximum load, after its electrical characteristics are satisfied.																		
Low Temp. Operating Test	The power supply unit is left in operation at a minimum temperature (-30°C) for 200 hours. This should be satisfied without applying the electrical characteristics.																		
High Temp. & High Humidity Operating Test	The power supply unit is left at an operating temperature (85°C) in 85% humidity for 200 hours. This should be satisfied without applying the electrical characteristics.																		
Low Temp. Storage Test	The power supply unit should be left at minimum temperature (-35°C) for 96 hours or more. Then the switching regulator is left at room temperature and humidity for an hour or more and then the electrical characteristics should be satisfied																		
Heat cycle Operating Test	<p>The power supply unit is left at room temperature and humidity for an hour or more after 10 consecutive temperature cycles are performed while heated. Afterwards, the electrical characteristics should be satisfied.</p> <table border="1"> <thead> <tr> <th>Consecutive Cycle</th> <th>Temperature</th> </tr> </thead> <tbody> <tr> <td>10 minutes</td> <td>25°C</td> </tr> <tr> <td>30 minutes</td> <td>25°C → -35°C</td> </tr> <tr> <td>240 minutes</td> <td>Minimum temperature(-35°C)</td> </tr> <tr> <td>30 minutes</td> <td>-35°C → 25°C</td> </tr> <tr> <td>10 minutes</td> <td>25°C</td> </tr> <tr> <td>30 minutes</td> <td>25°C → 85°C</td> </tr> <tr> <td>240 minutes</td> <td>Maximum temperature (85°C)</td> </tr> <tr> <td>30 minutes</td> <td>85°C → 25°C</td> </tr> </tbody> </table>	Consecutive Cycle	Temperature	10 minutes	25°C	30 minutes	25°C → -35°C	240 minutes	Minimum temperature(-35°C)	30 minutes	-35°C → 25°C	10 minutes	25°C	30 minutes	25°C → 85°C	240 minutes	Maximum temperature (85°C)	30 minutes	85°C → 25°C
Consecutive Cycle	Temperature																		
10 minutes	25°C																		
30 minutes	25°C → -35°C																		
240 minutes	Minimum temperature(-35°C)																		
30 minutes	-35°C → 25°C																		
10 minutes	25°C																		
30 minutes	25°C → 85°C																		
240 minutes	Maximum temperature (85°C)																		
30 minutes	85°C → 25°C																		
Vibration Test	<p>The power supply unit is left at below environment condition for 2 hours or more ;</p> <ul style="list-style-type: none"> <li>- Vibration amplitude: 1.5mm, Frequency: 10-5-10Hz,</li> <li>- Sweep Time: 1Min, each of each X, Y, and Z for 2 hours or more.</li> </ul> <p>There should be no damage to its appearance and structure.</p>																		
Appearance Test	There should be no contaminant or dirt on the switching regulator that may cause damage (adverse effect) on the electrical characteristics. There should be no excessive unevenness or scratches on the plated or painted surface.																		

## 9.2 Mean Time Between Failure (MTBF)

The product has been designed by 60,000 MTBF with 90% reliability index under below conditions.

- Input voltage : 12V DC
- Duty cycle : 6hours ON, 2hours OFF
- Ambient Temp :  $25 \pm 2^\circ\text{C}$
- Humidity : prevailing condition

It measured by Lambda Predict Program, "Reliasoft" made. And it calculates by the Telcordia SR-332 Issue 3

The MTBF : **278,576** hours

(refer to the calculation data can be provided by users' request additionally)

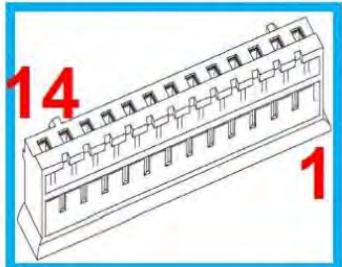

Category	Location No.	Failure Rate(t=INF) (FITs)	MTBF (hrs)	Contribution	Quantity

## 12. Appendix – A

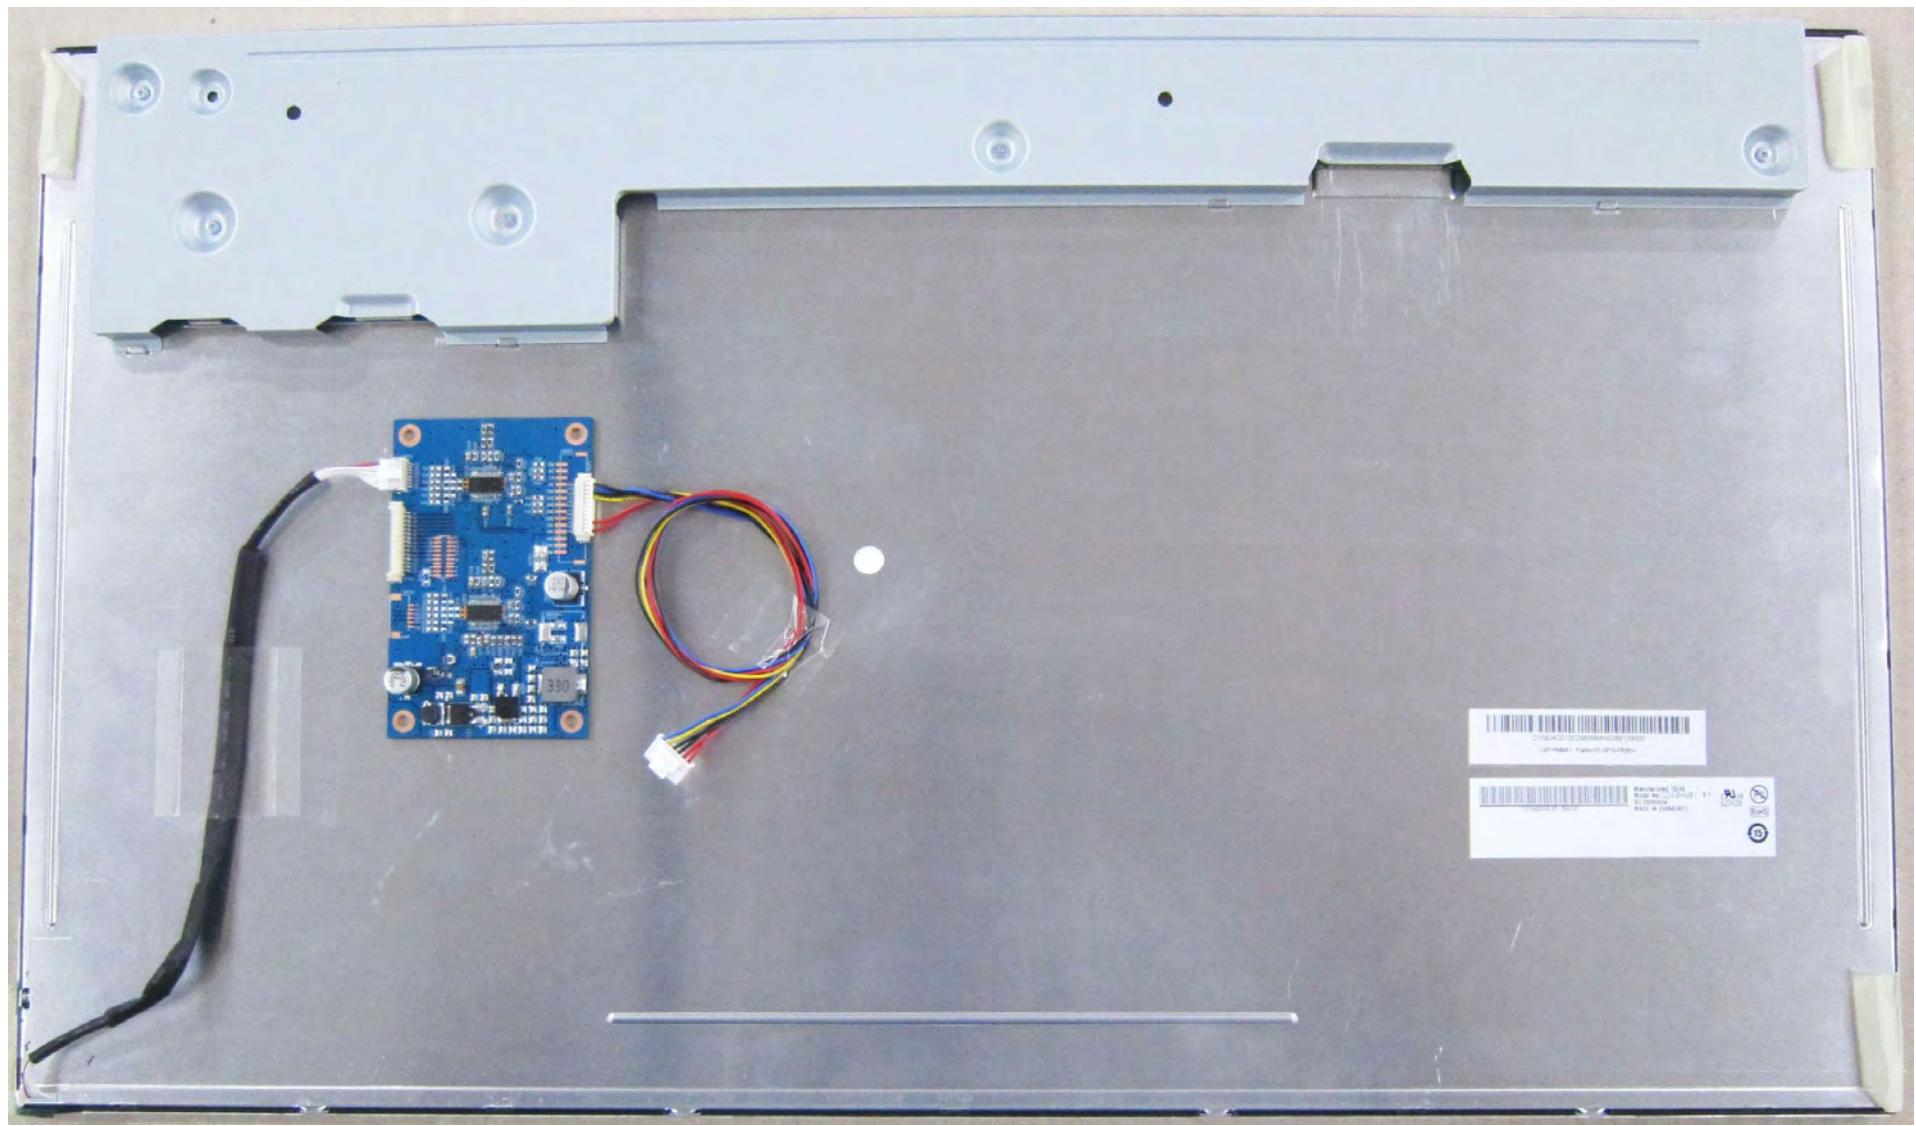

Tested LCD Record of Output Voltage & Current

### 12.1 AUO 24", G240HW01 V1 Panel

This is one of built-in LED Driver, but the built-in LED Driver cannot perform the wide range dimming function. Therefore adopt the CVT-WD2 external type wide range dimming supportable LED Driver instead of built-in one.

Specified LCD Model	Output Connector	No. of BLU CH	Output Voltage Range (V)			Output Constant Current (mA)		
			Min.	Typ.	Max.	Min.	Typ.	Max.
AUO 24", G240HW01 V1	CN500, CI1408M1HRL-NH / CVILUX	7 CH	-	28	-	42.7	45	47.3

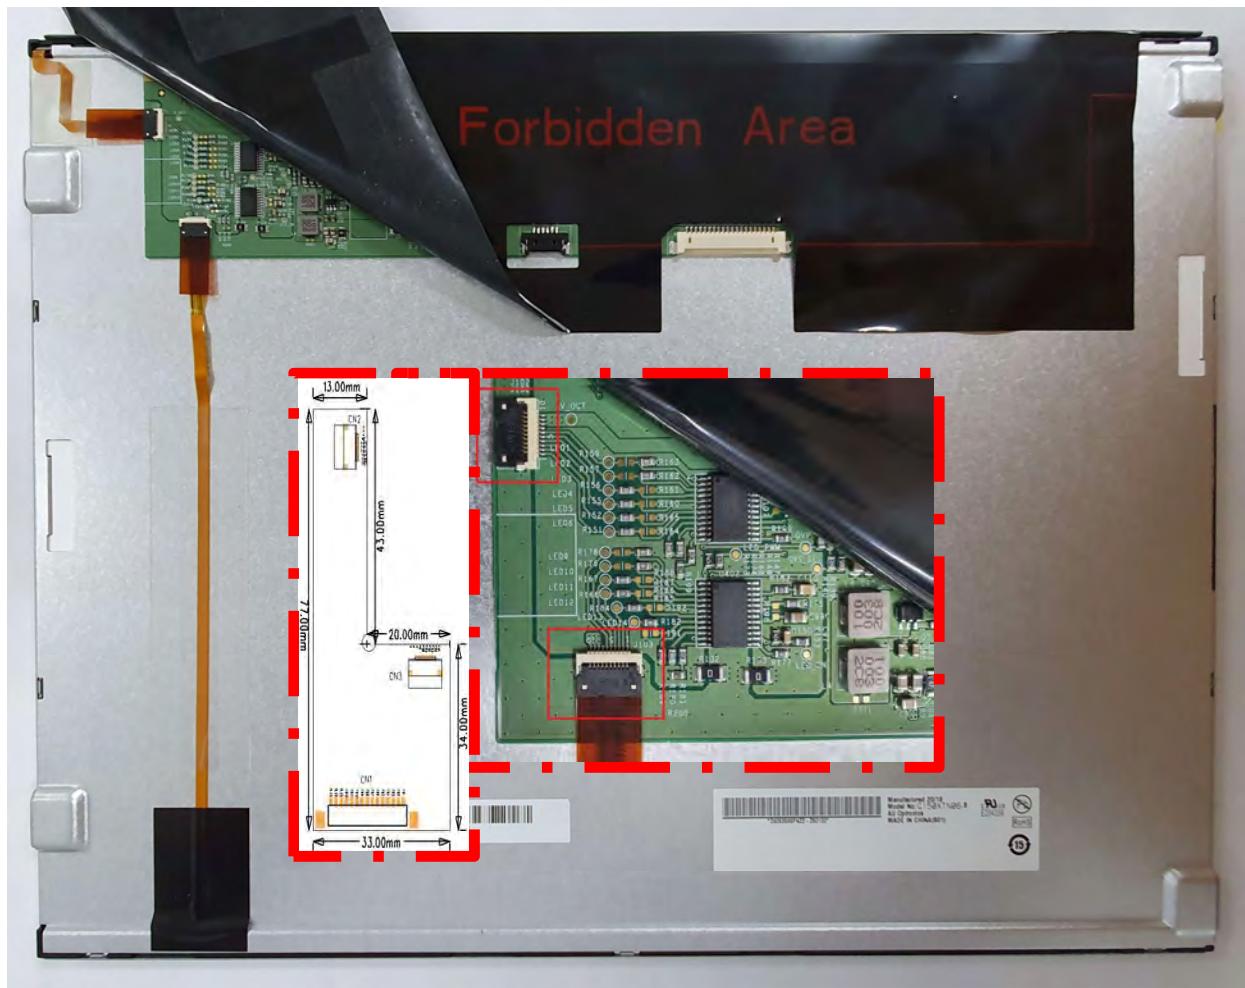

## 12.2 AUO 15", G150XTN06.B Panel

This is one of built-in LED Driver, but the built-in LED Driver cannot perform the wide range dimming function. Therefore adopt the CVT-WD2 external type wide range dimming supportable LED Driver instead of built-in one.

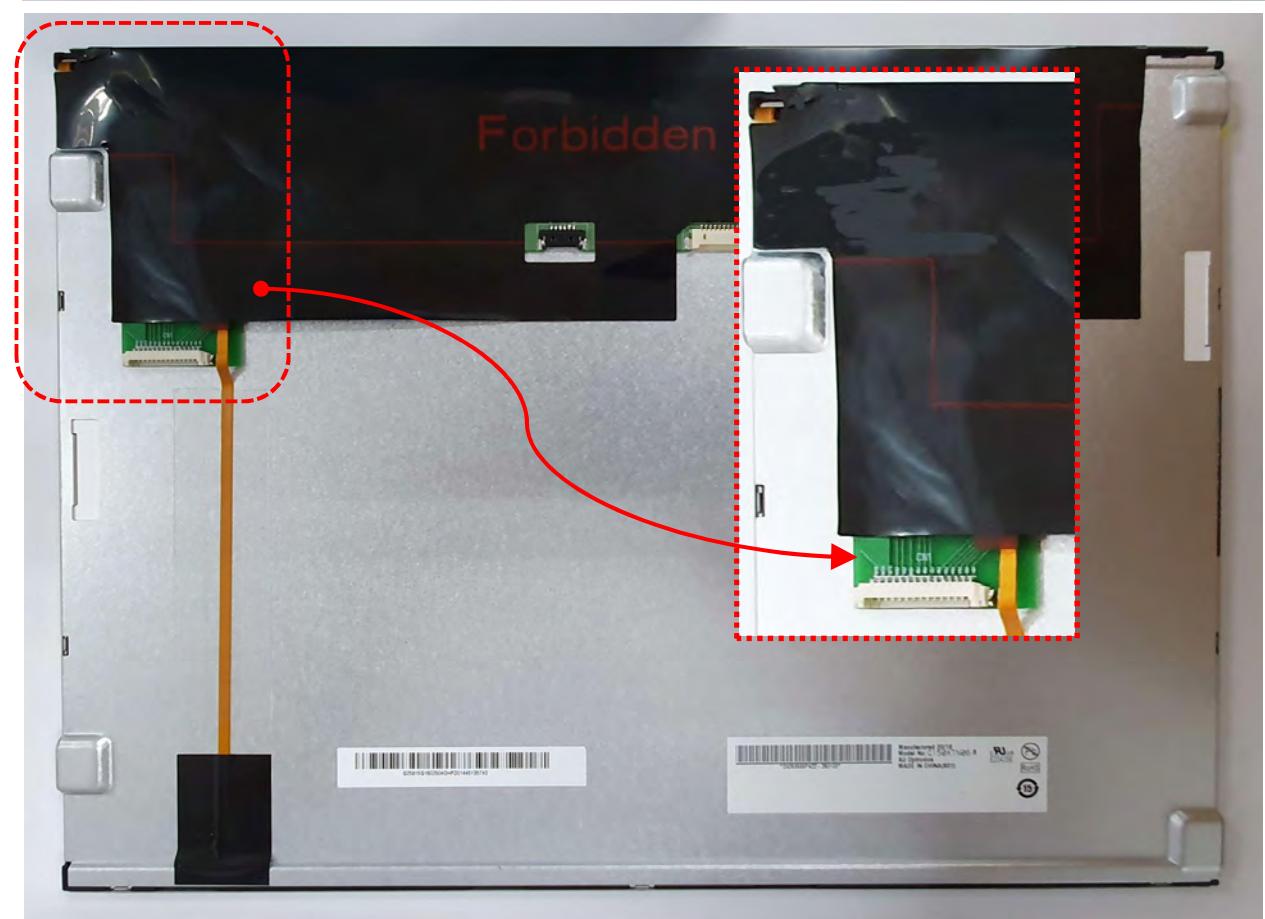

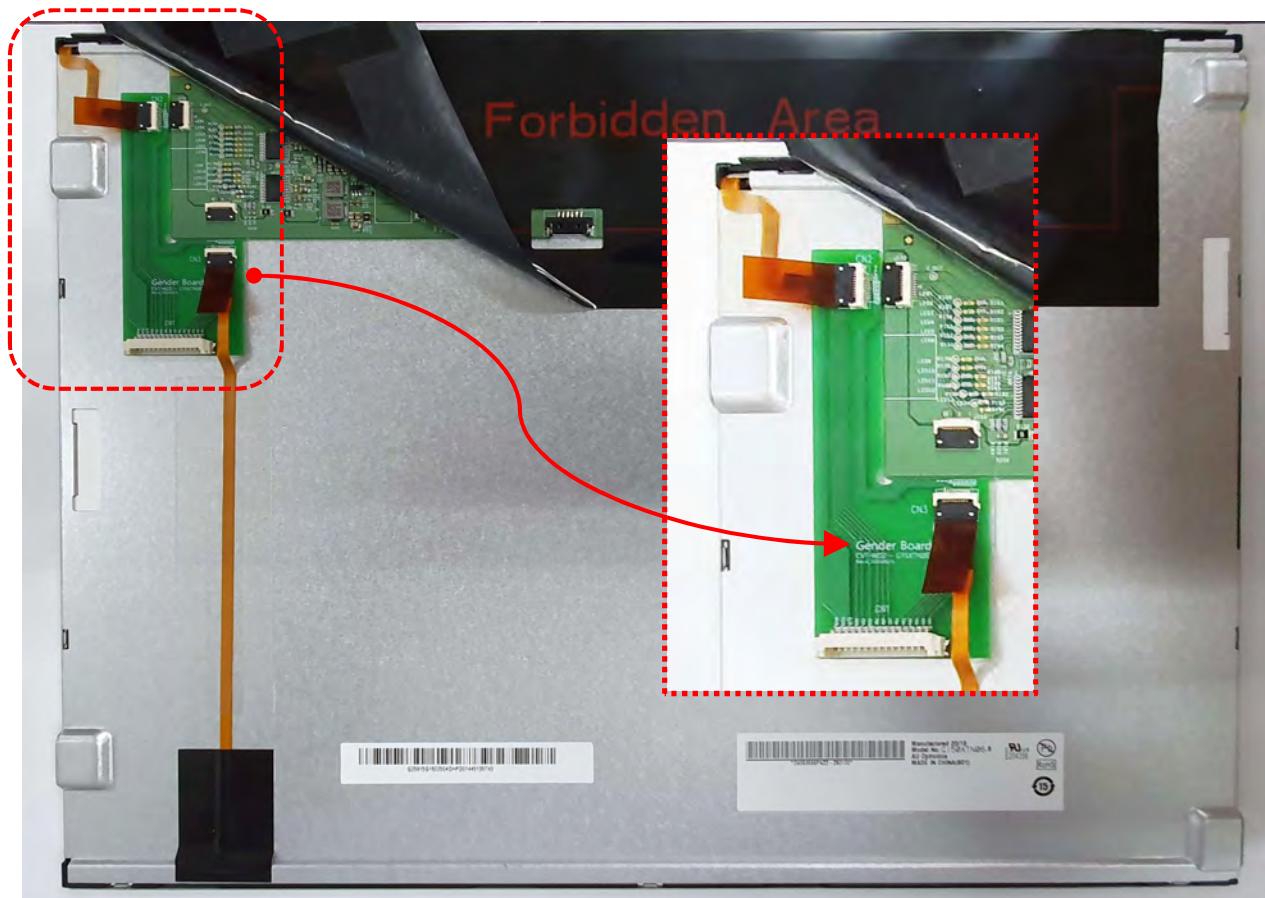

Specified LCD Model	Output Connector	No. of BLU CH	Output Voltage Range (V)			Output Constant Current (mA)		
			Min.	Typ.	Max.	Min.	Typ.	Max.
AUO 15", G150XTN06.B	Daughter Board 24022-MSK / CVILUX	8 CH	-	23.7	-	34.0	<b>35.8</b>	37.6

**CN1 : 12505WR-15P**  
(Yeon-Ho / 1.25 Pitch, 15 Pin)

Pin No	Symbol	Description	Pin No	Symbol	Description
1	V <sub>LED</sub>	LED Input (Anode)	9	FB6	Feedback 6 / NC
2	V <sub>LED</sub>	LED Input (Anode)	10	FB7	Feedback 7 (Cathode)
3	V <sub>LED</sub>	LED Input (Anode)	11	FB8	Feedback 8 (Cathode)
4	FB1	Feedback 1 (Cathode)	12	FB9	Feedback 9 (Cathode)
5	FB2	Feedback 2 (Cathode)	13	FB10	Feedback 10 (Cathode)
6	FB3	Feedback 3 (Cathode)	14	FB11	Feedback 11 / NC
7	FB4	Feedback 4 (Cathode)	15	FB12	Feedback 12 / NC
8	FB5	Feedback 5 / NC			

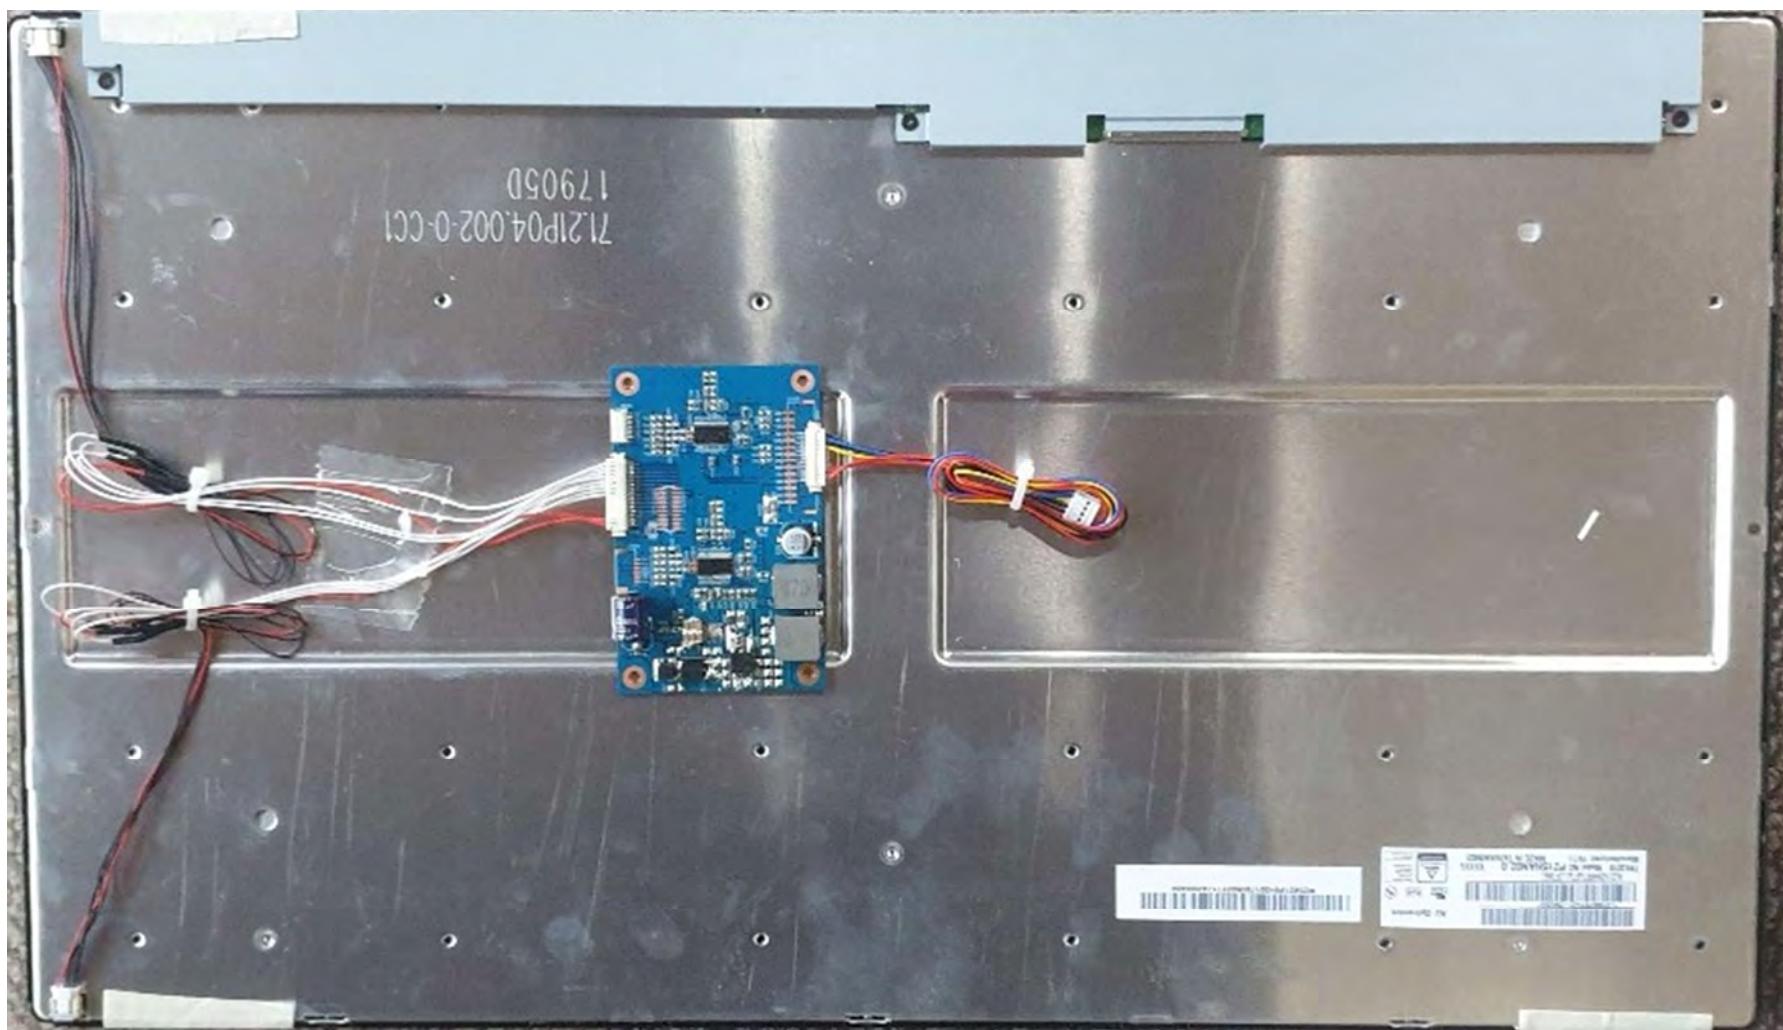

~ 25 ~

### 12.3 AUO 21.5", P215HAN02.0 Panel

This is a high brightness version LCD Module which has 8 channels, 47mA/Channel, 95.2Vf LED Backlight Rail. Therefore need to adopt this CVT-WD2 at 24V input DC Power and so below spec table including relevant parameters.

Specified LCD Model	Output Connector	No. of BLU CH	Output Voltage Range (V) / LCD Panel Spec			Output Constant Current (mA) / LED Driver Spec		
			Min.	Typ.	Max.	Min.	Typ.	Max.
AUO 21.5", P215HAN02.0	CN2 & CN3 Cvivilux, CI16M1VRA-NH	4CH x 2	91.8	95.2	109.3	44.7	47	49.3

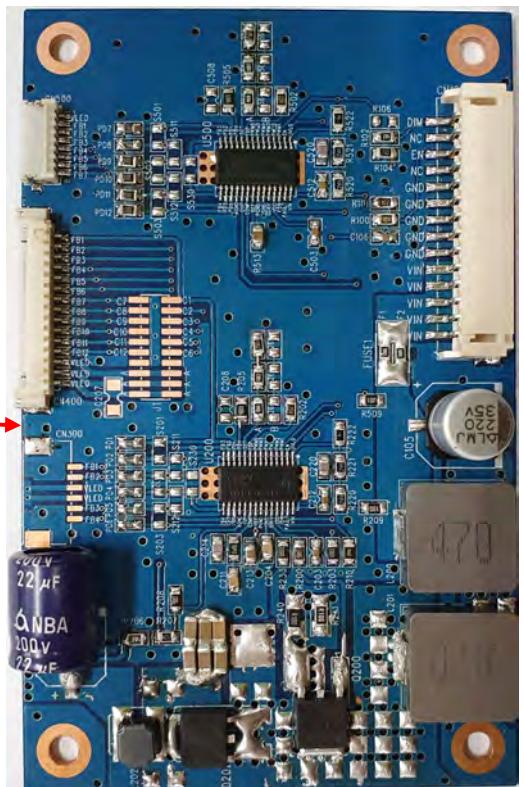

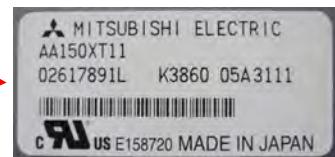

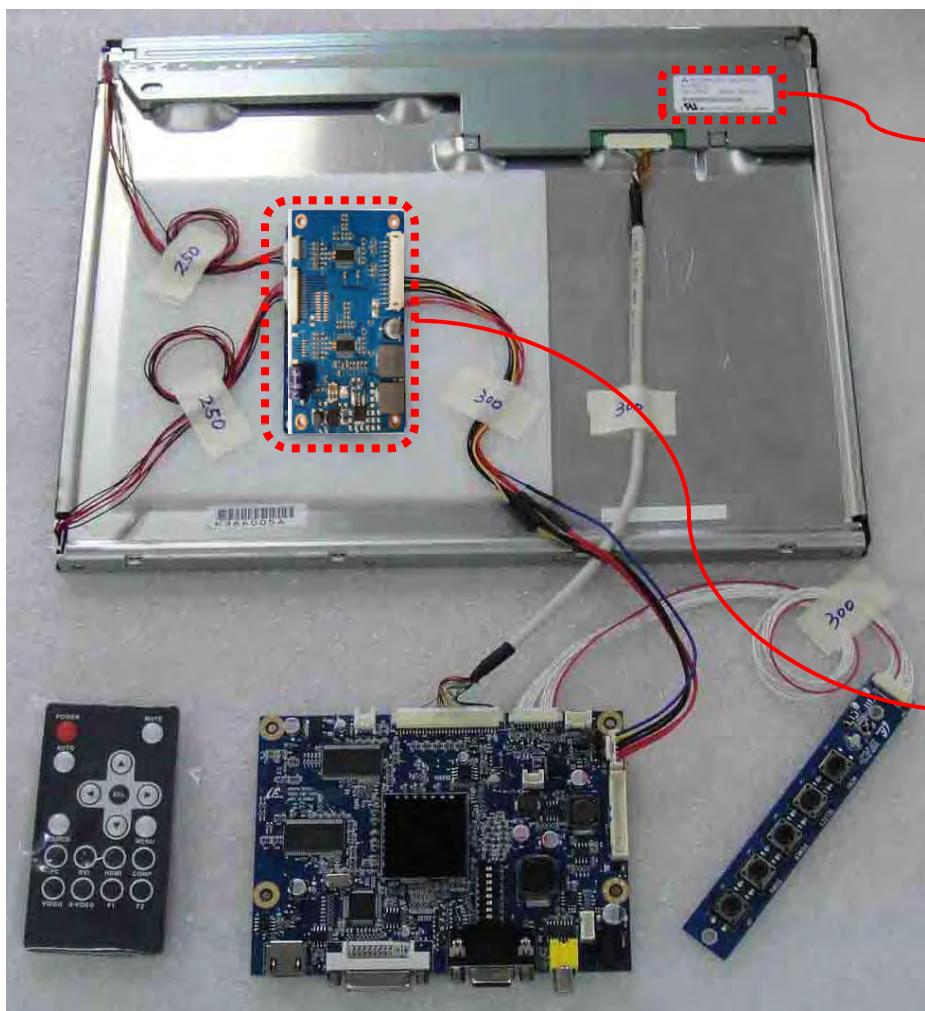

## 12.4 Mitsubishi 15", AA150XT11 Panel

This is a high brightness (1500 cd/m<sup>2</sup>) version LCD Module which has 8 channels, 100mA/Channel, 24Vf LED Backlight Rail.

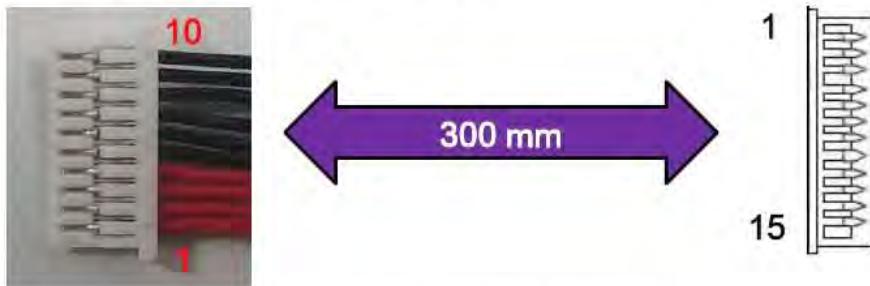

The out voltage is 24Vf, therefore need to adopt this CVT-WD2 at 12V input DC Power & min 3.75 A AC/DC Adaptor and so below spec table including relevant parameters.

Specified LCD Model	Output Connector	No. of BLU CH	Output Voltage Range (V) / LCD Panel Spec			Output Constant Current (mA) / LED Driver Spec		
			Min.	Typ.	Max.	Min.	Typ.	Max.
Mitsubishi 15", AA150XT11	CN2 & CN3, JST, SM10B-SHLS- TF(LF)	4CH x 2	-	24	32.5	-	100	110

- Mating connection cable between the Mitsubishi 15" and CVT-WD2 LED Driver

PN : CBL301-CVTWD2-AA150XT11

## 12.5 LG 31.5", LM315WR1-SSA1 Panel

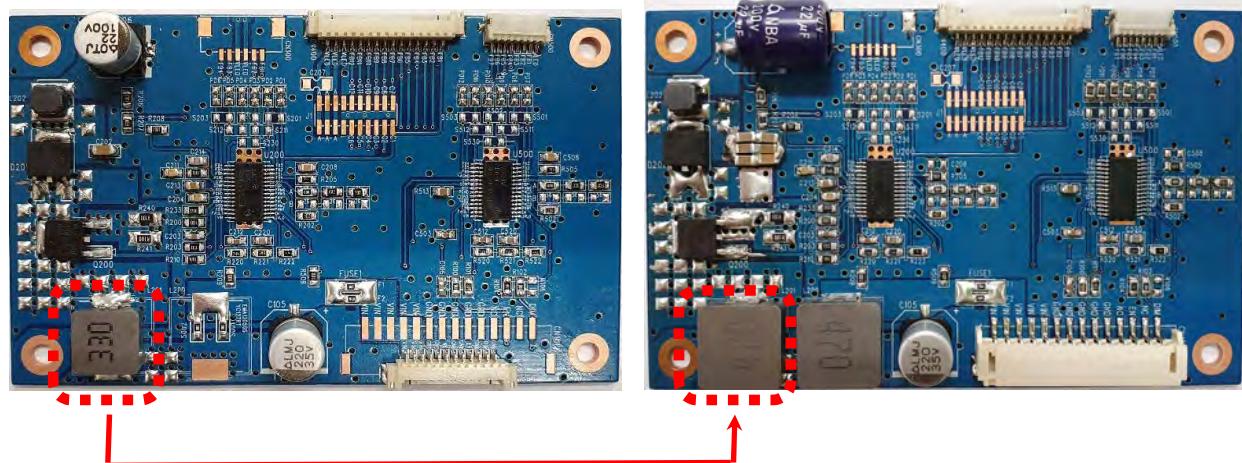

This is 4CH LED Backlight type panel which has been connected by 2 separated connection port, 2 CH each x 2 ports (left and right bottom).

Specified LCD Model	Output Connector	No. of BLU CH	Output Voltage Range (V) / LCD Panel Spec			Output Constant Current (mA) / LED Driver Spec		
			Min.	Typ.	Max.	Min.	Typ.	Max.
LG 31.5", LM315WR1-SSA1	CN2 & CN3, JST, SHJP-06V-S(HF), SHJP-06V-A-K(HF)	4CH	52.5-	56.3	60.1	-	<b>110</b>	

The details of setting guide from standard hardware changing points are :

- for OVP (over Voltage Protection) setting : R206 at 220k Ohm :
- for current / string setting : R281 at 43K Ohm, 1% type and R282 at 2.2K Ohm, 1% type
- for others setting : R205 at 75k Ohm, PD1 & PD2 at 30K Ohm,  
and Remove the R1, R2, R3, R509
- Based on input voltage by 24V DC

In case of 12V DC input condition due to the users' environment, the L201 Inductor has to be changed from 33 $\mu$ H to 47 $\mu$ H

The real connection pictures will be enclosed.

## **12.6 LG 27", LM270QQ2-SPA3 Panel**

This is 4CH LED Backlight type panel.

Specified LCD Model	Output Connector	No. of BLU CH	Output Voltage Range (V) / LCD Panel Spec			Output Constant Current (mA) / LED Driver Spec		
			Min.	Typ.	Max.	Min.	Typ.	Max.
LG 27", LM270QQ2- SPA3	10035WR-H06D(HF) / Yeon-Ho	4CH	53.8-	54.5	62.1	-	<b>145</b>	150

The details of setting guide from standard hardware changing points are ;

- for OVP (over Voltage Protection) setting : R206 at 220k Ohm :
- for current / string setting : R291 at 33K Ohm, 1% type and R292 at 1.5K Ohm, 1% type
- for FBV (Feed Back Voltage) setting : R205 at 56K Ohm
- for others setting : PD6 & PD5 at 30K Ohm,  
and Change the R1, R2, R3 from 0 Ohm to NC, R509 from 10 Ohm to NC NC
- Based on input voltage by 24V DC

## **13. Appendix – B : Drawings for adopted connectors**

The relevant drawing of Applied Connectors can be provided by customers' request additionally.
