1.0 GENERAL DESCRIPTION

1.1 Introduction

HV320FHB-F40 is a color active matrix TFT LCD MDL using amorphous silicon TFT's (Thin Film Transistors) as an active switching devices. This open cell has a 31.51 inch diagonally measured active area with FHD resolutions (1920 horizontal by 1080 vertical pixel array). Each pixel is divided into RED, GREEN, BLUE dots which are arranged in vertical stripe and this open cell can display 16.7M colors. The TFT-LCD panel used for this open cell is adapted for a low reflection and higher color type.

TFT-LCD

1.2 Features

- LVDS interface with 2 pixel / clock
- High-speed response
- Low color shift image quality
- 8-bit color depth, display 16.7M colors
- High luminance and contrast ratio, low reflection and wide viewing angle
- DE (Data Enable) only mode
- ADSDS technology is applied for high display quality
- RoHS compliant

2.0 ABSOLUTE MAXIMUM RATINGS

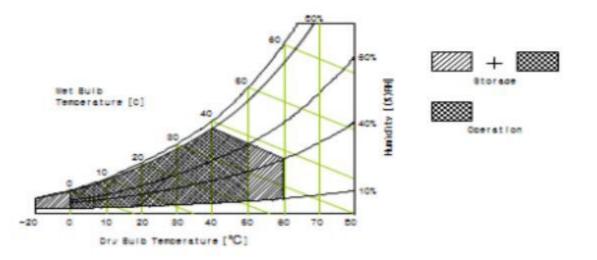

2.1 ABSOLUTE RATINGS OF ENVIRONMENT

The followings are maximum values which, if exceed, may cause faulty operation or damage to the unit. The operational and non-operational maximum voltage and current values are listed in Table 2.

| | VSS=GND=0V | | | | | |
|-------------------------------|-----------------|---------|------|------|------------|--|
| Parameter | Symbol | Min. | Max. | Unit | Remark | |
| Power Supply Voltage | VDD | VSS-0.3 | 14 | v | Ta = 25 °C | |
| Operating Temperature | TOP | 0 | +50 | °C | | |
| | TSUR | 0 | +60 | °C | Note 1 | |
| Storage Temperature | T _{ST} | -20 | +60 | °C | | |
| Operating Ambient Humidity | Нор | 10 | 80 | %RH | | |
| Storage Humidity | Hst | 10 | 80 | %RH | 1 | |

< Table 2. Open Cell Electrical Specifications >

Note 1 : Temperature and relative humidity range are shown in the figure below. Wet bulb temperature should be 39 °C max. and no condensation of water.

2.2 ABSOLUTE RATINGS OF ENVIRONMENT

When storing modules as spares for a long time, the following precaution is necessary. (a) Do not leave the module in high temperature, and high humidity for a long time. It is highly recommended to store the module with temperature from 20 to 25° Cat and $50 \pm 10^{\circ}$ RH. (b) The module shall be stored in dark place. Do not store the TFT-LCD module in direct sunlight or fluorescent light.

3.8 POWER SEQUENCE

To prevent a latch-up or DC operation of the Open Cell, the power on/off sequence shall be as shown in below.

< Table 15 Sequence Table >

| Deservation | | I Indian | | |
|-------------|-----|----------|-----|-------|
| Parameter | Min | Тур | Max | Units |
| T1 | 0.5 | | 20 | ms |
| T2 | 10 | - | - | ms |
| T3 | 200 | - | - | ms |
| T4 | 100 | - | - | ms |
| T5 | 0 | - | - | ms |
| T6 | 1 | - | - | S |

Notes: 1. Back Light must be turn on after power for logic and interface signal are valid.

2. Even though T1 is out of SPEC, it is still ok if the inrush current of VDD is below the limit.

| Angle | | Vertical | Θ ₁₂ | | | 89 | _ | Deg. | (1) |
| | | | Θ_6 | | | 89 | _ | | |

Note (1) Definition of Contrast Ratio (CR):

The contrast ratio can be calculated by the following expression.

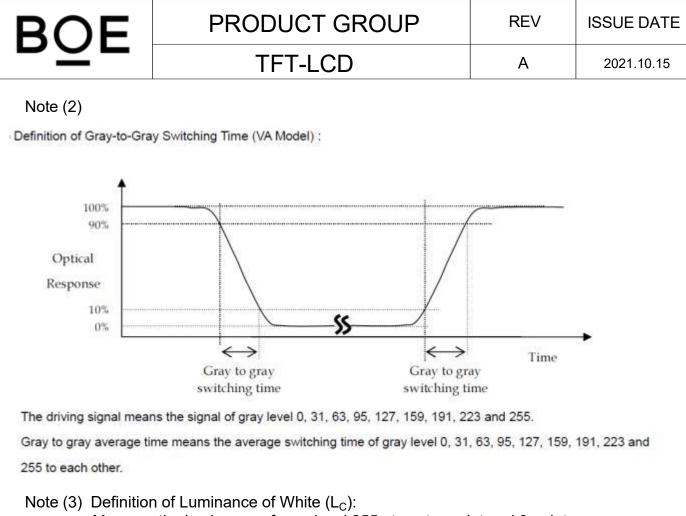

Contrast Ratio (CR) = L255 / L0

L255: Luminance of gray level 255

L 0: Luminance of gray level 0

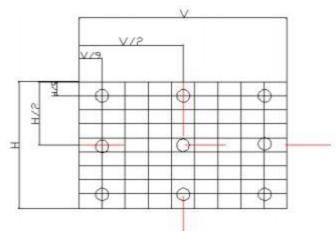

CR = CR (5), where CR (X) is corresponding to the Contrast Ratio of the point X at the figure in note(6)

| SPEC. TITLE | PAGE |
|--|----------|
| HV320FHB-F40 Product Specification Rev.A | 18 OF 34 |

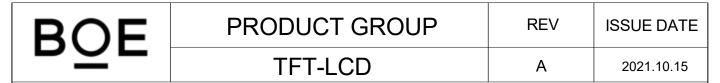

Note (3) Definition of Luminance of White (L_C): Measure the luminance of gray level 255 at center point and 9 points $L_C = L$ (5), where L (X) is corresponding to the luminance of the point X at the figure in Note (6)

Note (4) Definition of White Variation (6W) : Measure the luminance of gray level 255 at 9 points 6W = Maximum(Lon1, Lon2,...,Lon9)/ Minimum(Lon1, Lon2,...Lon9)

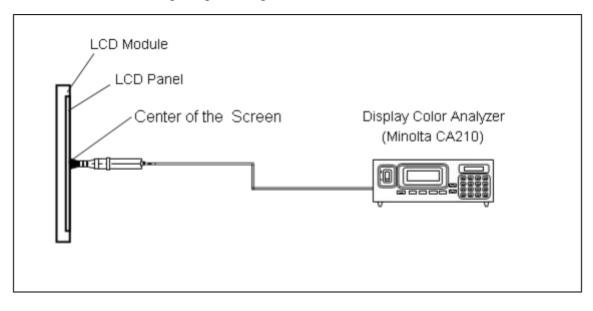

| SPEC. TITLE | PAGE |
|--|---------------|
| HV320FHB-F40 Product Specification Rev.A | 19 OF 34 |
| | A4(210 X 297) |

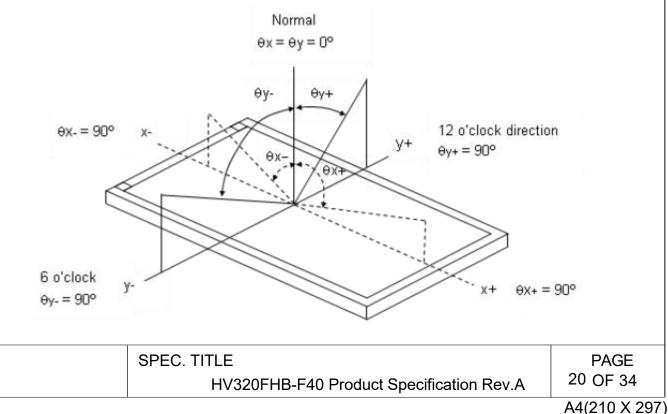

Note (5) Measurement Setup:

The LCD module should be stabilized at given temperature for 30 minutes to avoid abrupt temperature change during measuring. In order to stabilize the luminance, the measurement should be executed after lighting Backlight for 30 minutes in a windless room.

Note (6) Definition of Viewing Angle (9x, 9y): Viewing angle are measured by CS-2000.

| | | |

5.0 MECHANICAL SPECIFICATIONS

5.1 Dimensional Requirements

Figure 1(located in Appendix) shows mechanical outlines for the model HV320FHB-F40. Other parameters are shown in Table 18.

< Table 18. Dimensional Parameters >

| Parameter | Specification | |
|------------------|--|--------|
| Active area | 698.4 (H) × 392.85(V) | mm |
| Pixel pitch | 121.25 (H) × 363.75 (V) | pm |
| Number of pixels | 1920(H) × 1080(V) (1 pixel = R + G + B dots) | pixels |
| Weight | 850 | gram |

5.2 Semi-Glare and Polarizer Hardness

The surface of the LCD has an Anti-glare coating to minimize reflection and a coating to Reduce scratching.

8.0 PACKING INFORMATION

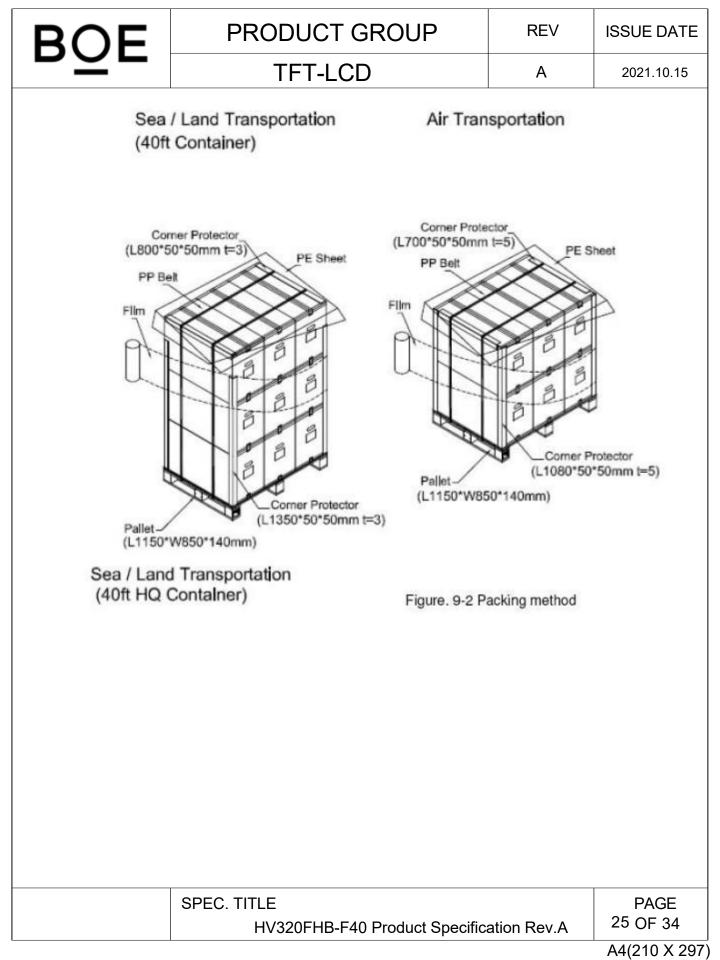

BOE provides the standard shipping container for customers, unless customer specifies their packing information. The standard packing method and Barcode information are shown in below.

8.1 Packing Specifications

- (1) 6LCD TV modules / 1 Box
- (2) Box dimensions: 820(L) x375(W) x520(H)mm
- (3) Weight: approximately 36Kg (6 modules per box)

8.2 Packing Method

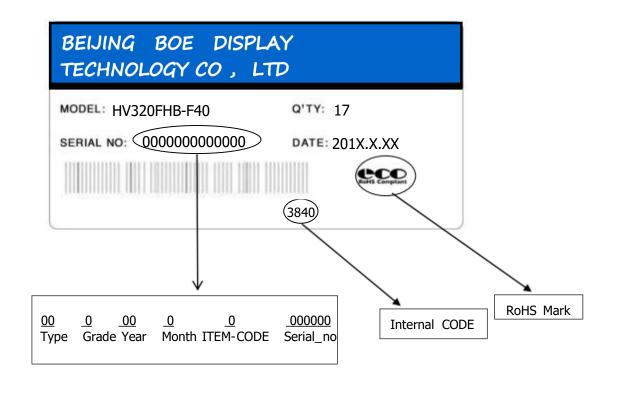

2021.10.15

8.3 Box Label

- Label Size : 110 mm (L) × 55 mm (W)
- Contents

Model : HV320FHB-F40 Q`ty : 6Pcs Serial No. : Box Serial No. See next page for detail description. Date : Packing Date FG Code : FG Code of Product

А

9.0 HANDING & CAUTIONS

Please pay attention to the followings when you use this TFT LCD Module.

- 9.1 Mounting Precautions
- Use finger-stalls with soft gloves in order to keep display clean during the incoming inspection and assembly process.
- You must mount a module using specified mounting holes (Details refer to the drawings)
- You should consider the mounting structure so that uneven force (ex. Twisted stress, Concentrated stress) is not applied to the module. And the case on which a module is mounted should have sufficient strength so that external force is not transmitted directly to the module.
- Do not apply mechanical stress or static pressure on module; Abnormal display cause by pressing some parts of module during assembly process, do not belong to product failure, the press should be agreed by two sides.
- Determine the optimum mounting angle, refer to the viewing angle range in the specification for each model.
- Do not apply mechanical stress or static pressure on module , and avoid impact, vibration and falling.
- Acetic acid type and chlorine type materials for the cover case are not desirable because the former generates corrosive gas of attacking the polarizer at high temperature and the latter causes circuit break by electro-chemical reaction.
- Protection film for polarizer on the module should be slowly peeled off before display.
- Be careful to prevent water & chemicals contact the module surface.
- You should adopt radiation structure to satisfy the temperature specification.
- Do not touch, push or rub the exposed polarizers with glass, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment. Do not touch the surface of polarizer for bare hand or greasy cloth.(Some cosmetics are detrimental to the polarizer.)
- When the surface becomes dusty, please wipe gently with absorbent cotton or other soft materials like chamois soaks with petroleum benzine. Normal-hexane & alcohol is recommended for cleaning the adhesives used to attach front / rear polarizers. Do not use acetone, toluene, because they cause chemical damage to the polarizer.
- Wipe off saliva or water drops as soon as possible. Their long time contact with polarizer causes deformations and color fading. .

| HV320FHB-F40 Product Specification Rev.A | 27 OF 34 |

| В | 0 | Ε |
|---|---|---|
| | | |

TFT-LCD

- This module has its circuitry PCB's on the rear side and Driver IC, should be handled carefully in order not to be stressed.
- Avoid impose stress on PCB and Driver IC during assembly process ,Do not drawing, bending, COF package & wire
- Do not disassemble the module.

9.2 Operating Precautions

- Do not connector or disconnect the cable to/from the Module at the "Power On" Condition.
- When the module is operating, do not lose CLK, ENAB signals. If any one of these signals is lost, the module would be damaged.
- Obey the supply voltage sequence. If wrong sequence is applied, the module would be damaged.
- · Do not allow to adjust the adjustable resistance or switch
- The electrochemical reaction caused by DC voltage will lead to LCD module degradation, so DC drive should be avoided.
- The LCD modules use C-MOS LSI drivers, so customers are recommended that any unused input terminal would be connected to Vdd or Vss, do not input any signals before power is turn on, and ground you body, work/assembly area, assembly equipment to protect against static electricity.
- Do not exceed the absolute maximum rating value. (supply voltage variation, input voltage variation, variation in part contents and environmental temperature, and so on) Otherwise the Module may be damaged.
- Module has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimized the interference.
- Design the length of cable to connect between the connector for back-light and the converter as shorter as possible and the shorter cable shall be connected directly, The long cable between back-light and Converter may cause the Luminance of LED to lower and need a higher startup voltage
- The cables should be as short as possible between System Board and PCB interface.
- Connectors are precision devices to transmit electrical signals, and operators should plug in parallel
- Be careful for condensation at sudden temperature change. Condensation makes damage to polarizer or electrical contacted parts. And after fading condensation, smear or spot will occur.

| SPEC. TITLE | PAGE |
|--|----------|
| HV320FHB-F40 Product Specification Rev.A | 28 OF 34 |

9.3 Electrostatic Discharge Precautions

- Avoid the use work clothing made of synthetic fibers. We recommend cotton clothing or other conductivity-treated fibers.
- Since a module is composed of electronic circuits, it is not strong to electrostatic discharge. Make certain that treatment persons are connected to ground through wrist band etc.
- Do not close to static electricity to avoid product damage.
- Do not touch interface pin directly.

9.4 Precautions for Strong Light Exposure

• Do not leave the module operation or storage in Strong light . Strong light exposure causes degradation of polarizer and color filter.

9.5 Precautions for Storage

A. Atmosphere Requirement

| ITEM | UNIT | MIN | MAX |
|------------------------|--|-----|-----|
| Storage Temperature | (C) | 5 | 40 |
| Storage Humidity | (%rH) | 40 | 75 |
| Storage Life | 6 months | | |
| Storage Condition | The storage room should be equipped with a dark and good ventilation facility. Prevent products from being exposed to the direct sunlight, moisture and water. The product need to keep away from organic solvent and corrosive gas. Be careful for condensation at sudden temperature change. Storage condition is guaranteed under packing conditions. | | |

B. Package Requirement

- The product should be placed in a sealed polythene bag.
- Product Should be placed on the pallet, Which is away from the floor, Be cautions not to pile the product up.
- The polarizer surface should not come in contact with any other object. It is recommended that they be stored in the container in which they were shipped.
- As the original protective film, do not use the adhesive protective film to avoid change of Pol color and characteristic.

| | SPEC. TITLE | PAGE |
|--------------------------------|--|----------|
| HV320FHB-F40 Product Specifica | HV320FHB-F40 Product Specification Rev.A | 29 OF 34 |

А

BOE

9.6 Precautions for protection film

- Remove the protective film slowly, keeping the removing direction approximate 30-degree not vertical from panel surface, If possible, under ESD control device like ion blower, and the humidity of working room should be kept over 50%RH to reduce the risk of static charge.
- People who peeled off the protection film should wear anti-static strap and grounded well.

9.7 Appropriate Condition for Commercial Display

-Generally large-sized LCD modules are designed for consumer applications . Accordingly, long-term display like in Commercial Display application, can cause uneven display including image sticking. To optimize module's lifetime and function, several operating usages are required.

1. Normal operating condition

- Temperature: 20± 15C
- Operating Ambient Humidity : 55±20%
- Display pattern: dynamic pattern (Real display)
- Well-ventilated place is recommended to set up Commercial Display system
- 2. Special operating condition
 - a. Ambient condition

- Well-ventilated place is recommended to set up Commercial Display system.

b. Power and screen save

- Periodical power-off or screen save is needed after long-term display.

c. As the low temperature, the response time is greatly delayed. As the high temperatures (higher than the operating temperature) the LCD module may turn black screen. The above phenomenon cannot explain the failure of the display. When the temperature returns to the normal operating temperature, the LCD module will return to normal display.

d. When expose to drastic fluctuation of temperature (hot to cold or cold to hot) ,the LCD module may be affected; Specifically, drastic temperature fluctuation from cold to hot ,produces

dew on the LCD module 's surface which may affect the operation of the polarizer and LCD module e. Do not exceed the absolute maximum rating value. (supply voltage variation, input voltage variation, variation in part contents and environmental temperature, and so on) Otherwise the Module may be damaged.

f. Products exposed to low temperature environment for a long time, need to carry out necessary protection , low temperature environment is usually refrigerators , vending machine Etc...

g. Long time and large angle forword use or unconventional use , It is strongly recommended to contact BOE for filed application engineering advice

| SPEC. TITLE | PAGE |
|--|----------|
| HV320FHB-F40 Product Specification Rev.A | 30 OF 34 |

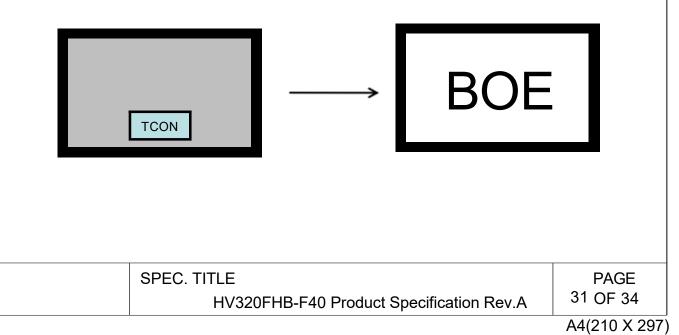

BOE

f. Product reliability and functions are only guaranteed when the product is used under right operation usages. If product will be used in extreme conditions such as high temperature, high humidity, high altitude, special display images, running time, long time operation, outdoor operation, etc. It is strongly recommended to contact BOE for filed application engineering advice. Otherwise, its reliability and function may not be guaranteed. Extreme conditions are commonly found at airports, transit stations, banks, stock market and controlling systems.

3. Operating usages to protect against image sticking due to long-term static display.

- a. Suitable operating time: under 20 hours a day.
- b. Static information display recommended to use with moving image.
- Cycling display between 5 minutes' information(static) display and 10 seconds' moving image.
- c. Background and character (image) color change
- Use different colors for background and character, respectively.
- Change colors themselves periodically.
- d. Avoid combination of background and character with large different luminance.
- 1) Abnormal condition just means conditions except normal condition.
- 2) Black image or moving image is strongly recommended as a screen save
- 4. Lifetime in this spec. is guaranteed only when Commercial Display is used according to operating usages.
- 5. Module should be turned clockwise based on front view when used in portrait mode.
- Landscape Mode

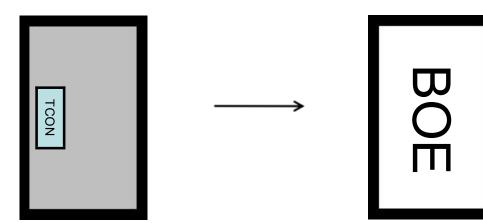

The default placement is TCON side on the lower side and the image is shown upright via viewing from the front.

| BOE | PRODUCT GROUP | REV | ISSUE DATE |
|-----|---------------|-----|------------|
| DZL | TFT-LCD | А | 2021.10.15 |

• Portrait Mode

The default placement is that TCON side has to be placed on the left side via viewing from the front

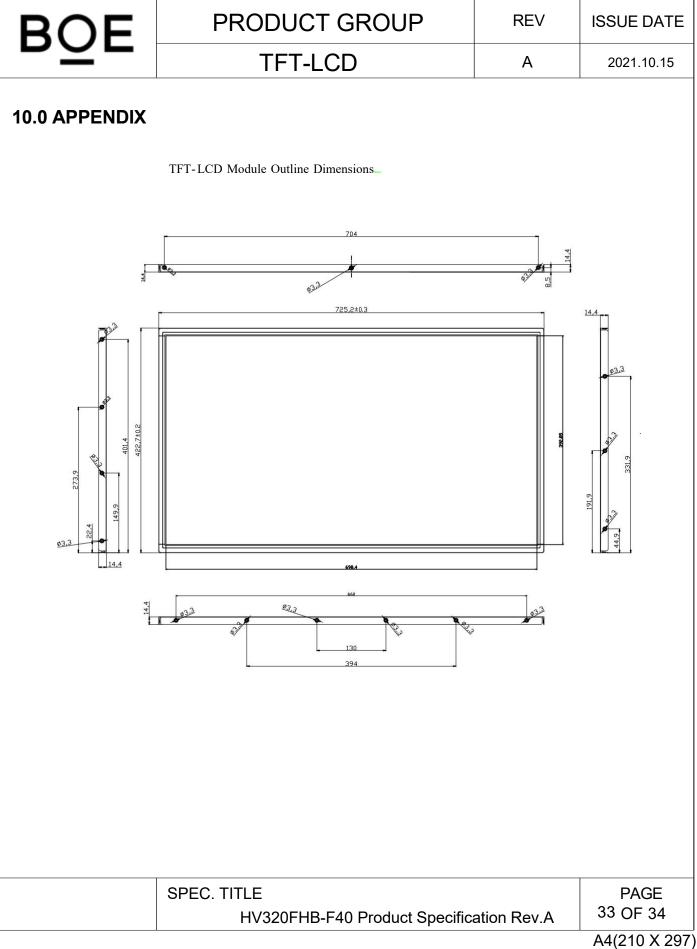

9.8 Other Precautions

A. LC Leak

- If the liquid crystal material leaks from the panel, it is recommended to wash the LC with acetone or ethanol and then burn it.
- If the liquid crystal material leaks from the panel, it should be kept away from the eyes or mouth. In case of contact with hands, skin or clothes, it has to be washed away thoroughly with soap.
- If LC in mouth, mouth need to be washed, drink plenty of water to induce vomiting and follow medical advice.
- If LC touch eyes, eyes need to be washed with running water at least 15 minutes.
- B. Rework
- When returning the module for repair or etc., Please pack the module not to be broken. We recommend to use the original shipping packages.
