#### **INTRODUCTION**

The Copyright to this document belongs to Tianma Japan, Ltd. (hereinafter called "TMJ"). No part of this document will be used, reproduced or copied without prior written consent of TMJ.

TMJ does and will not assume any liability for infringement of patents, copyrights or other intellectual property rights of any third party arising out of or in connection with application of the products described herein except for that directly attributable to mechanisms and workmanship thereof. No license, express or implied, is granted under any patent, copyright or other intellectual property right of TMJ.

Some electronic products would fail or malfunction at a certain rate. In spite of every effort to enhance reliability of products by TMJ, the possibility of failures and malfunction might not be avoided entirely. To prevent the risks of damage to death, human bodily injury or other property arising out thereof or in connection therewith, each customer is required to take sufficient measures in its safety designs and plans including, but not limited to, redundant system, fire-containment and anti-failure.

The products are classified into three grades: "Standard", "Special", and "Specific".

Each quality grade is designed for applications described below. Any customer who intends to use a product for application other than that of Standard is required to contact an TMJ sales representative in advance.

The **Standard:** Applications as any failure, malfunction or error of the products are free from any damage to death, human bodily injury or other property (Products Safety Issue) and not related the safety of the public (Social Issues), like general electric devices.

Examples: Office equipment, audio and visual equipment, communication equipment, test and measurement equipment, personal electronic equipment, home electronic appliances, car navigation system (with no vehicle control functions), seat entertainment monitor for vehicles and airplanes, fish finder (except marine radar integrated type), PDA, etc.

The **Special:** Applications as any failure, malfunction or error of the products might directly cause any damage to death, human bodily injury or other property (Products Safety Issue) and the safety of the public (Social Issues) and required high level reliability by conventional wisdom.

Examples: Vehicle/train/ship control system, traffic signals system, traffic information control system, air traffic control system, surgery/operation equipment monitor, disaster/crime prevention system, etc.

The **Specific:** Applications as any failure, malfunction or error of the products might severe cause any damage to death, human bodily injury or other property (Products Safety Issue) and the safety of the public (Social Issues) and developed, designed and manufactured in accordance with the standards or quality assurance program designated by the customer who requires extremely high level reliability and quality.

Examples: Aerospace system (except seat entertainment monitor), nuclear control system, life support system, etc.

The quality grade of this product is the "Standard" unless otherwise specified in this document.

#### **1. OUTLINE**

#### 1.1 STRUCTURE AND PRINCIPLE

Color LCD module NL10276BC13-01C is composed of the amorphous silicon thin film transistor liquid crystal display (a-Si TFT LCD) panel structure with driver LSIs for driving the TFT (Thin Film Transistor) array and a backlight.

The a-Si TFT LCD panel structure is injected liquid crystal material into a narrow gap between the TFT array glass substrate and a color-filter glass substrate.

Color (Red, Green, Blue) data signals from a host system (e.g. signal generator, etc.) are modulated into best form for active matrix system by a signal processing board, and sent to the driver LSIs which drive the individual TFT arrays.

The TFT array as an electro-optical switch regulates the amount of transmitted light from the backlight assembly, when it is controlled by data signals. Color images are created by regulating the amount of transmitted light through the TFT array of red, green and blue dots.

#### **1.2 APPLICATION**

• For industrial use

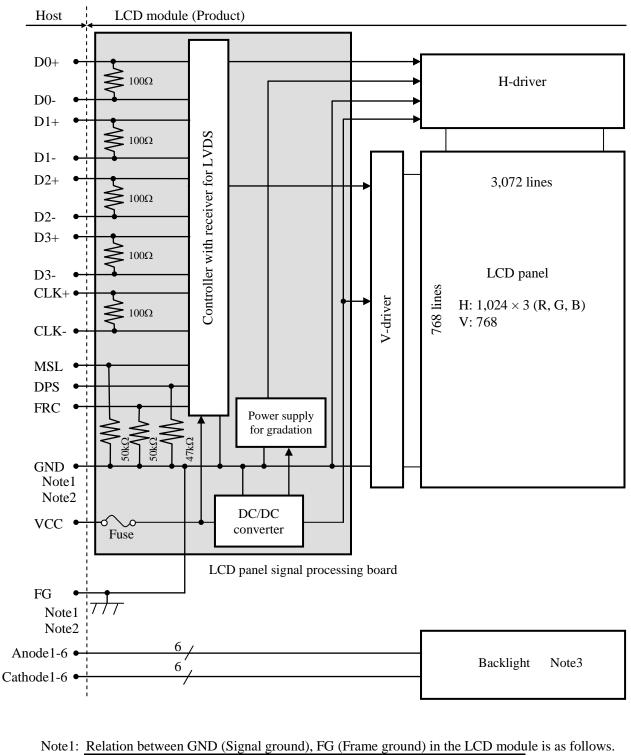

#### **1.3 FEATURES**

- Adoption of T-EVT (Transmissive- Enhanced View TFT)
- High resolution
- High luminance
- High contrast
- Wide viewing angle
- Low reflection
- LVDS interface
- Reversible-scan direction
- Selectable 8-bit or 6-bit digital signals for data of RGB
- LED backlight
- Replaceable lamp for backlight
- Acquisition product for UL60950-1/CSA-C22.2 No.60950-1-03 (File number: E170632)
- Compliant with the European RoHS directive (2011/65/EU)

#### 2. GENERAL SPECIFICATIONS

| Display area               | 132.096 (H) × 99.072 (V) mm   |  |  |  |  |  |  |
|----------------------------|---|--|--|--|--|--|--|
| Diagonal size of display   | 17cm (6.5inches)  |  |  |  |  |  |  |
| Drive system               | a-Si TFT active matrix  |  |  |  |  |  |  |
| Display color              | 16,777,216 colors (At 8-bit input, FRC terminal= High)<br>262,144 colors (At 6-bit input, FRC terminal= Low or Open)  |  |  |  |  |  |  |

☆

#### 4.3.2 Backlight

(Ta=25°C, Note1, Note2, Note3)

| Parameter       | Symbol | min. | typ. | max. | Unit | Remarks                  |
|-----------------|--------|------|------|------|------|--------------------------|
| Forward current | IL     | -    | 15   | 18   | mA   | Note4                    |
| Forward Voltage | VL     | -    | 27.9 | 31.5 | V    | at IL=15mA / One circuit |

Note1: Please drive with constant current.

Note2: The above specifications are for one LED circuit of the backlight.

Note3: The Luminance uniformity may be changed depending on the current variation between 6 circuits. It is recommended that the current value difference between each circuit is among the circuits to be less than 5%.

#### Note4: See "4.2 ABSOLUTE MAXIMUM RATINGS Note4".

#### 4.3.3 Power supply voltage ripple

This product works if the ripple voltage levels are over the permissible values as the following table, but there might be noise on the display image.

| Power sup | ply voltage | Ripple voltage Note1<br>(Measure at input terminal of power supply) | Unit  |
|-----------|-------------|---|-------|
| VCC       | 3.3V        | ≤ 100   | mVp-p |

Note1: The permissible ripple voltage includes spike noise.

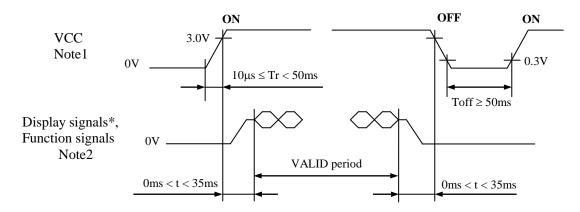

#### 4.3.4 Fuse

| Deverator |               | Fuse            | Rating         | Fusing current | Remarks |
|-----------|---------------|-----------------|----------------|----------------|---------|
| Parameter | Type Supplier | Kaung           | Fusing current | Kennarks       |         |
| VCC       | FCC16162AB    | KAMAYA ELECTRIC | 1.6A           | 2.24           | Nota1   |
| VCC       | FCC10102AB    | CO., LTD.       | 36V            | 3.2A           | Note1   |

Note1: The power supply's rated current must be more than the fusing current. If it is less than the fusing current, the fuse may not blow in a short time, and then nasty smell, smoke and so on may occur.

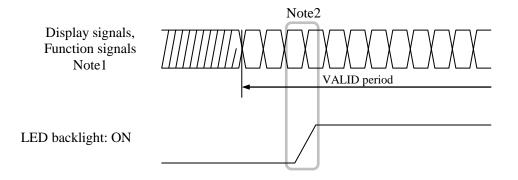

#### 4.4 POWER SUPPLY VOLTAGE SEQUENCE

4.4.1 LCD panel signal processing board

\* These signals should be measured at the terminal of  $100\Omega$  resistance.

- Note1: If there is a voltage variation (voltage drop) at the rising edge is below 3.0V, there is a possibility that a product does not work due to a protection circuit.
- Note2: Display signals (D0+/-, D1+/-, D2+/-, D3+/-, CLK+/-) and function signals (DPS, FRC, MSL) must be set to Low or High-impedance, except the VALID period (See above sequence diagram), in order to avoid the circuitry damage.
  If some of display and function signals of this product are cut while this product is working, even if the signal input to it once again, it might not work normally. If a customer stops the display and function signals, VCC also must be shut down.
- 4.4.2 LED driver

- Note1: These are the display and function signals for LCD panel signal processing board.
- Note2: The backlight should be turned on within the valid period of display and function signals, in order to avoid unstable data display.

#### 4.5 CONNECTIONS AND FUNCTIONS FOR INTERFACE PINS

#### 4.5.1 LCD panel signal processing board

#### CN1 socket (LCD module side): FI-SE20P-HFE (Japan Aviation Electronics Industry Limited (JAE)) Adaptable plug: FI-S20S (Japan Aviation Electronics Industry Limited (JAE))

| T       | able plug.              |  | Input data signal   |                            |                         |                |  |  |  |  |  |  |

Note1: See "4.6 DISPLAY COLORS AND INPUT DATA SIGNALS".

Note2: See "4.8 SCANNING DIRECTIONS".

Note3: Twist pair wires with  $100\Omega$  (Characteristic impedance) should be used between LCD panel signal processing board and LVDS transmitter.

Note4: All GND and VCC terminals should be used without any non-connected lines.

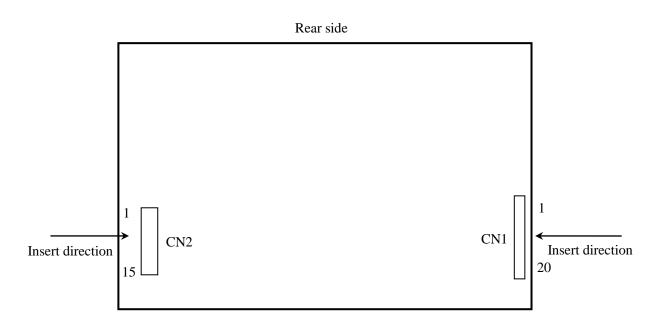

Note5: See "4.5.4 Connection between receiver and transmitter for LVDS".

4.5.3 Positions of socket

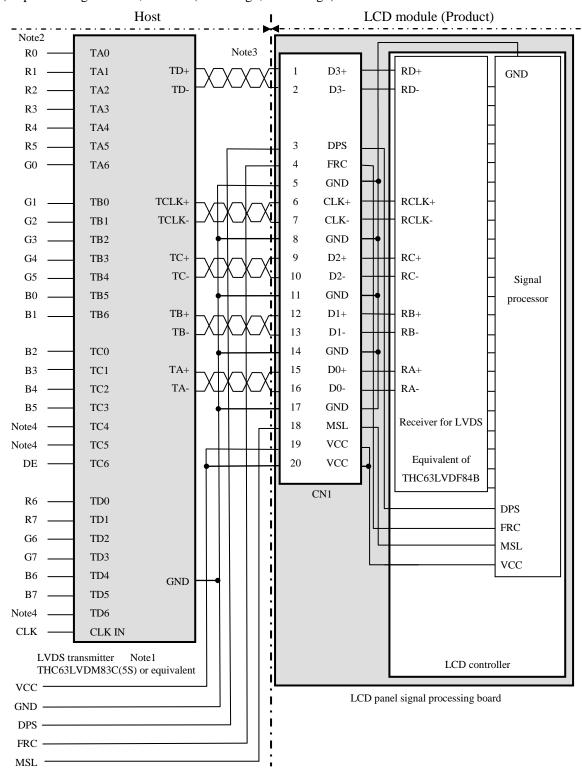

4.5.4 Connection between receiver and transmitter for LVDS

(1) Input data signal: 8-bit, MAP A (FRC: High, MSL: Low or Open)

Note1: Recommended transmitter: THC63LVDM83C(5S) (THine Electronics Inc.) or equivalent

Note2: LSB (Least Significant Bit) - R0, G0, B0 MSB (Most Significant Bit) - R7, G7, B7

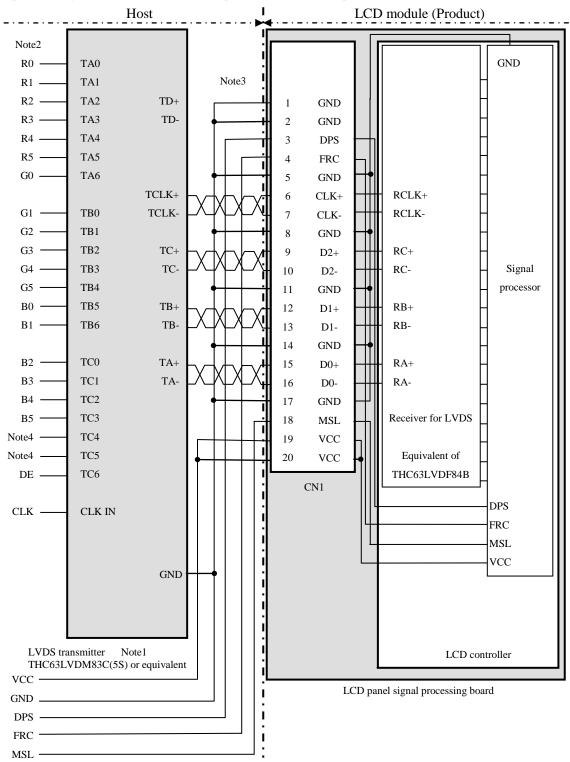

- Note3: Twist pair wires with  $100\Omega$  (Characteristic impedance) should be used between LCD panel signal processing board and LVDS transmitter.
- Note4: Input signals to TC4, TC5 and TD6 are not used inside the product, but do not keep them open to avoid noise problem.

(2) Input data signal: 8-bit, MAP B (FRC: High, MSL: High)

- Note1: Recommended transmitter: THC63LVDM83C(5S) (THine Electronics Inc.) or equivalent
- Note2: LSB (Least Significant Bit) R0, G0, B0 MSB (Most Significant Bit) R7, G7, B7
- Note3: Twist pair wires with  $100\Omega$  (Characteristic impedance) should be used between LCD panel signal processing board and LVDS transmitter.
- Note4: Input signals to TC4, TC5 and TD6 are not used inside the product, but do not keep them open to avoid noise problem.

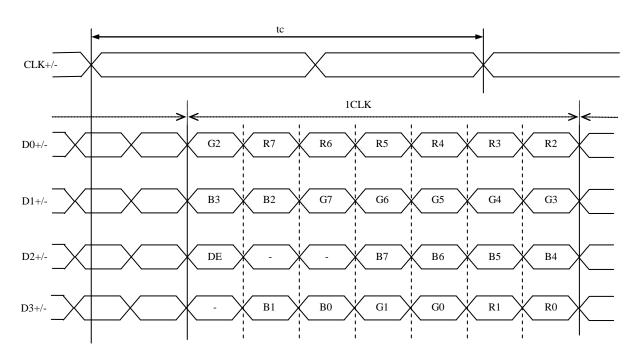

### NL10276BC13-01C

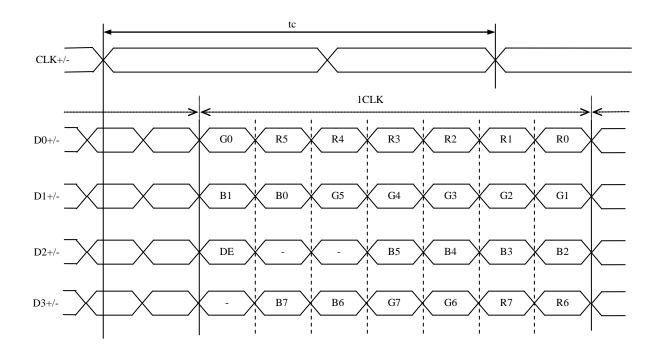

(3) Input data signal: 6-bit (FRC: Low or Open, MSL: Low or Open)

- Note1: Recommended transmitter: THC63LVDM83C(5S) (THine Electronics Inc.) or equivalent
- Note2: LSB (Least Significant Bit) R0, G0, B0 MSB (Most Significant Bit) R5, G5, B5
- Note3: Twist pair wires with  $100\Omega$  (Characteristic impedance) should be used between LCD panel signal processing board and LVDS transmitter.
- Note4: Input signals to TC4 and TC5 are not used inside the product, but do not keep them open to avoid noise problem.

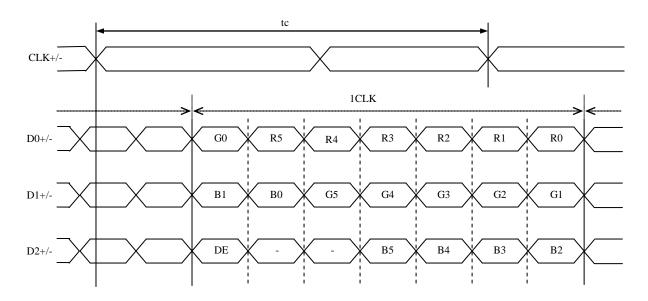

- 4.5.5 Input data mapping
- (1) Input data signal: 8-bit, MAP A

(2) Input data signal: 8-bit, MAP B

(3) Input data signal: 6-bit

#### 4.6 DISPLAY COLORS AND INPUT DATA SIGNALS

4.6.1 Combinations of input data signals, FRC and MSL signals

This product can display equivalent of 16,777,216 colors and 262,144 colors by combination of input data signals, FRC and MSL signals. See following table.

| Combination | Input data<br>signals | Input data<br>mapping | CN1-<br>Pin No.1 and 2 | FRC terminal | MSL terminal | Display colors | Remarks |
|-------------|-----------------------|-----------------------|------------------------|--------------|--------------|----------------|---------|
| 1           | 8-bit                 | Map A                 | D3+/-                  | High         | Low or Open  | 16,777,216     | Note1   |
| 2           | 8-bit                 | Map B                 | D3+/-                  | High         | High         | 16,777,216     | Note1   |
| 3           | 6-bit                 | -                     | GND                    | Low or Open  | Low or Open  | 262,144        | Note2   |

Note1: See "4.6.2 16,777,216 colors".

Note2: See "4.6.3 262,144 colors".

#### 4.6.2 16,777,216 colors

This product can display equivalent of 16,777,216 colors with 256 gray scales by combination ① or ②. (See "**4.6.1 Combinations of input data signals, FRC and MSL signals**".) Also the relation between display colors and input data signals is as follows.

| D' 1             | 1             |    |        |        |        |        |        |        | Data   | a sig  | nal    | (0: I  | Low    | leve   | el, 1  | : Hi   | gh le  | evel) | )      |        |        |        |        |        |        |

#### 4.6.3 262,144 colors

This product can display 262,144 colors with 64 gray scales by combination ③. (See "**4.6.1 Combinations of input data signals, FRC and MSL signals**".) Also the relation between display colors and input data signals is as follows.

| Display               | , aplan      |        |        |        |        |        |     |        |        | Low       |        |        | ligh le | evel)  |            |        |        |     |        |

| C( 0, 767)   | C( 1, 767) | • • • | C( X, 767) | • • • | C(1022, 767) | C(1023, 767) |  |  |  |

#### 4.8 SCANNING DIRECTIONS

The following figures are seen from a front view. Also the arrow shows the direction of scan.

Note1: Meaning of C (X, Y) and D (X, Y)

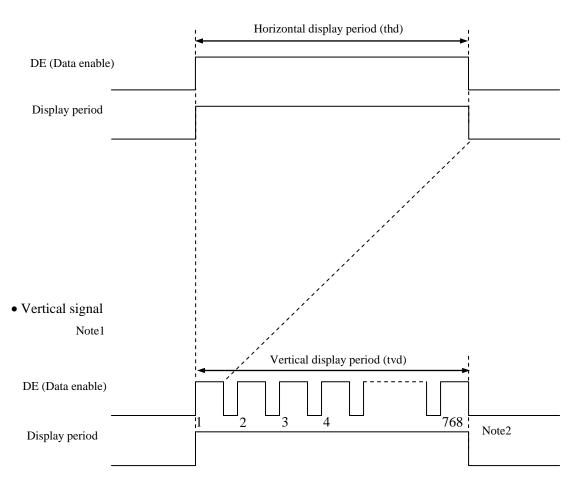

C (X, Y): The coordinates of the display position (See "**4.7 DISPLAY POSITIONS**".) D (X, Y): The data number of input signal for LCD panel signal processing board

#### 4.9 INPUT SIGNAL TIMINGS

• Horizontal signal

Note1

Note1: This diagram indicates virtual signal for set up to timing. Note2: See "**4.9.3 Input signal timing chart**" for numeration of pulse.

#### 4.9.2 Timing characteristics

Note1: These are initial characteristics.

Note2: Measurement conditions are as follows.

Ta= 25°C, VCC= 3.3V, IL= 15mA/One circuit, Display mode: XGA,

Horizontal cycle= 1/48.363kHz, Vertical cycle = 1/60.0Hz, DPS= Low or Open: Normal scan

Optical characteristics are measured at luminance saturation 20minutes after the product works in the dark room. Also measurement methods are as follows.

- Note3: See "4.10.2 Definition of contrast ratio".
- Note4: See "4.10.3 Definition of luminance uniformity".
- Note5: These coordinates are found on CIE 1931 chromaticity diagram.
- Note6: Product surface temperature: TopF= 28°C
- Note7: See "4.10.4 Definition of response times".
- Note8: See "4.10.5 Definition of viewing angles".

#### 4.10.2 Definition of contrast ratio

The contrast ratio is calculated by using the following formula.

Contrast ratio (CR) = Luminance of white screen Luminance of black screen

4.10.3 Definition of luminance uniformity

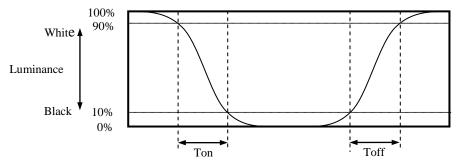

The luminance uniformity is calculated by using following formula.

The luminance is measured at near the 5 points shown below.

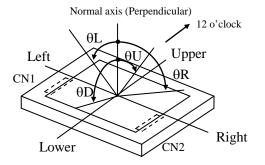

|     | 171 | 512 | 853 |  |  |
|-----|-----|-----|-----|--|--|
| 128 |     |     | @   |  |  |
| 384 |     |     |     |  |  |
| 640 |     |     | 5   |  |  |

4.10.4 Definition of response times

Response time is measured at the time when the luminance changes from "white" to "black", or "black" to "white" on the same screen point, by photo-detector. Ton is the time when the luminance changes from 90% down to 10%. Also Toff is the time when the luminance changes from 10% up to 90% (See the following diagram.).

4.10.5 Definition of viewing angles

#### 5. ESTIMATED LUMINANCE LIFETIME

The luminance lifetime is the time from initial luminance to half-luminance.

#### This lifetime is the estimated value, and is not guarantee value.

|                          | Condition   | Estimated luminance lifetime<br>(Life time expectancy)<br>Note1, Note2, Note3 | Unit |
|--------------------------|---|---|------|
| LED elementary substance | 25°C (Ambient temperature of the product)<br>Continuous operation, IL= 15mA/One circuit | 16,000  | h    |

Note1: Life time expectancy is mean time to half-luminance.

Note2: Estimated luminance lifetime is not the value for LCD module but the value for LED elementary substance.

Note3: By ambient temperature, the lifetime changes particularly. Especially, in case the product works under high temperature environment, the lifetime becomes short.

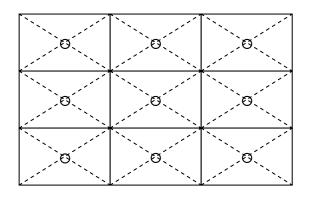

#### 6. RELIABILITY TESTS

| Test item                                    | Condition  | Judgment Note1                                 |  |  |

Note1: Display and appearance are checked under environmental conditions equivalent to the inspection conditions of defect criteria.

Note2: See the following figure for discharge points.

#### 7. PRECAUTIONS

#### 7.1 MEANING OF CAUTION SIGNS

The following caution signs have very important meaning. Be sure to read "7.2 CAUTIONS" and "7.3 ATTENTIONS"!

This sign has the meaning that a customer will be injured or the product will sustain damage if the customer practices wrong operations.

This sign has the meaning that a customer will be injured if the customer practices wrong operations.

#### 7.2 CAUTIONS

\* Do not shock and press the LCD panel and the backlight! There is a danger of breaking, because they are made of glass. (Shock: Equal to or no greater than 539m/s<sup>2</sup> and equal to or no greater than 11ms, Pressure: Equal to or no greater than 19.6 N (φ16mm jig))

7.3.1 Handling of the product

- ① Take hold of both ends without touching the circuit board when the product (LCD module) is picked up from inner packing box to avoid broken down or misadjustment, because of stress to mounting parts on the circuit board.
- ② When the product is put on the table temporarily, display surface must be placed downward.
- ③ When handling the product, take the measures of electrostatic discharge with such as earth band, ionic shower and so on, because the product may be damaged by electrostatic.
- (4) The torque for product mounting screws must never exceed 0.147N·m. Higher torque might result in distortion of the bezel. And the length of product mounting screws must be  $\leq 2.0$ mm.
- ⑤ The product must be installed using mounting holes without undue stress such as bends or twist (See outline drawings). And do not add undue stress to any portion (such as bezel flat area). Bends or twist described above and undue stress to any portion may cause display mura.
- ⑤ Do not press or rub on the sensitive product surface. When cleaning the product surface, wipe it with a soft dry cloth.
- ⑦ Do not push or pull the interface connectors while the product is working.
- ③ When handling the product, use of an original protection sheet on the product surface (polarizer) is recommended for protection of product surface. Adhesive type protection sheet may change color or characteristics of the polarizer.
- ③ Usually liquid crystals don't leak through the breakage of glasses because of the surface tension of thin layer and the construction of LCD panel. But, if you contact with liquid crystal by any chance, please wash it away with soap and water.

#### 7.3.2 Environment

- ① Do not operate or store in high temperature, high humidity, dewdrop atmosphere or corrosive gases. Keep the product in packing box with antistatic pouch in room temperature to avoid dusts and sunlight, when storing the product.
- ② In order to prevent dew condensation occurred by temperature difference, the product packing box must be opened after enough time being left under the environment of an unpacking room. Evaluate the storage time sufficiently because dew condensation is affected by the environmental temperature and humidity. (Recommended leaving time: 6 hours or more with the original packing state after a customer receives the package)
- ③ Do not operate in high magnetic field. If not, circuit boards may be broken.
- ④ This product is not designed as radiation hardened.

#### 7.3.3 Characteristics

#### The following items are neither defects nor failures.

- ① Characteristics of the LCD (such as response time, luminance, color uniformity and so on) may be changed depending on ambient temperature. If the product is stored under condition of low temperature for a long time, it may cause display mura. In this case, the product should be operated after enough time being left under condition of operating temperature.
- ② Display mura, flickering, vertical streams or tiny spots s may be observed depending on display patterns.
- ③ Do not display the fixed pattern for a long time because it may cause image sticking. Use a screen saver, if the fixed pattern is displayed on the screen.
- (4) The display color may be changed depending on viewing angle because of the use of condenser sheet in the backlight.
- ⑤ Optical characteristics may be changed depending on input signal timings.
- (6) The product gives AR (antireflection) coating of the polarizer surface. Though AR (antireflection) coating actualizes the low reflection with the multilayer structure, the color of reflection may differ between products and the color change of reflection may occur in the same product by fluctuation of AR (antireflection) coating.

#### 7.3.4 Others

- ① All GND and VCC terminals should be used without any non-connected lines.
- ② Do not disassemble a product or adjust variable resistors.
- ③ See "REPLACEMENT MANUAL FOR LAMP HOLDER SET", when replacing lamp holder set.
- ④ Pack the product with the original shipping package, in order to avoid any damages during transportation, when returning the product to TMJ for repairing and so on.
- (5) The information of China RoHS (II) six hazardous substances or elements in this product is as follows.

| China RoHS (II) six hazardous substances or elements |                 |                 |                                   |                                     |   |  |  |  |  |
|--|-----------------|-----------------|-----------------------------------|-------------------------------------|---|--|--|--|--|
| Lead<br>(Pb)   | Mercury<br>(Hg) | Cadmium<br>(Cd) | Hexavalent<br>Chromium<br>(Cr VI) | Polybrominated<br>Biphenys<br>(PBB) | Polybrominated<br>Biphenyl Ethers<br>(PBDE) |  |  |  |  |
| ×  | 0               | 0               | 0                                 | 0                                   | 0   |  |  |  |  |

Note1: (): This indicates that the poisonous or harmful material in all the homogeneous materials for this part is equal or below the limitation level of GB/T26572-2011 standard regulation.

 $\times$ : This indicates that the poisonous or harmful material in all the homogeneous materials for this part is above the limitation level of GB/T26572-2011 standard regulation.
